Prepared for the Western Queensland Public Health Network

Maranoa Commissioning Locality covers the Local Government Areas of Burke, Carpentaria, Doomadgee, Mornington at the 2016 Census.

Preface

This report uses data from the Census, held every five years by the Australian Bureau of Statistics (ABS), to paint a profile of the Indigenous population of Lower Gulf CL as it was in August 2016, and show how it had changed over the previous decade.

Language in this report In this Portrait, the term 'Indigenous' is used to describe the 'first nations' peoples living in Lower Gulf CL, including Aboriginal nations and people from the Torres Strait. This recognises that Aboriginal people were the original inhabitants of Queensland.

Who is included? The people described in this Portrait were the usual residents of Lower Gulf CL in 2016. They had lived there for more than half the year. They are counted as 'usual residents' even if they completed the Census away from home. People who were visiting Lower Gulf CL on Census night, but did not live there, are not included.

Who are Indigenous? Indigenous people, in this Portrait, means all people who, in completing the Census, responded that they had Aboriginal or Torres Strait Islander origins, or both. Non-Indigenous people are those who said they did not have these origins. Note: the Census question asks people about their origins; it does not ask how they identify in their daily lives.

Are all Indigenous people counted? Not all Indigenous people completed the Census and identified their origins: 66.9% of the Locality's Census respondents said they had Indigenous origins, but another 5.7% did not answer this question. The ABS estimates that the net undercount rate for Aboriginal and Torres Strait Islander peoples was 17.5% in 2016 (equivalent to 137,750 persons nationally). This is slightly higher than 2011 (17.2%). This means that, on average, the Indigenous population was about a fifth larger than counted. However, despite such omissions, the Census is a vital source of information about Indigenous Australians.

National trends Nationally, the number of people with Indigenous origins counted in the Census rose by a fifth (21%) between 2011 and 2016. Almost three-quarters of the increase was from births; the rest was caused by more people identifying Indigenous origins than previously.

Sources of data The data for this report are drawn from the Aboriginal and Torres Strait Islander Peoples (Indigenous) Profiles and Community Profiles published by the ABS from the 2006, 2011 and 2016 Censuses. Data in this portrait for 2011 and 2006 censuses have been produced using the 2016 boundary regardless of changes to previous LGA or other geographical classifications over time.

A warning about accuracy Small Census numbers are not precise – they are randomised by the ABS to protect privacy. In this Portrait, numbers less than 5 are reported as 'a few'. Note: difference and changes shown in this Portrait are rounded to the nearest significant figure but are calculated from the unrounded data, so small anomalies are possible in the text.

Snapshot: Lower Gulf Commissioning Locality, 2016

- ⌘ In the 2016 Census, 3,236 of the 4,834 residents (66.9%) counted in Lower Gulf CL said that they had Aboriginal or Torres Strait Islander origins, or both. Of these, 97% were Aboriginal.
 - Between 2011 and 2016, the counted Indigenous population rose by 5%, from 3,090; the overall population of Lower Gulf CL fell by 3%.
 - About 11% of the Indigenous population were under 5 in 2016. This growth from births since 2011 was larger than the population growth, so other age groups had declined in number.
- ⌘ The Indigenous community in Lower Gulf CL is significantly younger than the non-Indigenous population, with a median age of 23 vs 44
 - The proportion under 18 years old was higher: 41% compared with 14% for non-Indigenous.
 - The proportion aged 65+ was lower: 4% compared with 18% for non-Indigenous.
- ⌘ Indigenous households had an average of 4.1 residents, which was larger than non-Indigenous households (2.0) in the Locality.
 - Three in ten Indigenous households were couples with children.
 - One in five Indigenous households were one parent families.
 - 13% of the Indigenous households were single persons (vs 39% of non-Indigenous households).
- ⌘ Indigenous households most commonly lived in rented dwellings (90%), with 4% in fully owned and 2% in mortgaged dwellings.
 - In all, 6% of Indigenous households in Lower Gulf CL were home-owners (with or without a mortgage), which was down by 4% since 2011.
- ⌘ The median income of Indigenous adults in Lower Gulf CL was about \$361 a week, which was 40% that of all adult residents (\$906).
 - The median income gap had increased by 2% since 2011, after having increased by 10% over the previous five years.
- ⌘ 44% of Indigenous adults were in the labour force, compared with 75% of non-Indigenous adults.
 - 24% of the Indigenous workforce were unemployed, compared with 2% of the non-Indigenous workforce.
- ⌘ One in four Indigenous residents (841 people) was attending an educational institution.
 - 327 Indigenous people had completed Year 12, which was 17% more than in 2011 and 79% more than in 2006.
 - Compared with non-Indigenous residents of the same age, there were:
 - 8% more Indigenous people aged 15–19 year olds in education;
 - 9% fewer Indigenous people aged 0–4 year olds in education.
 - 29% of Indigenous adults had some type of post-school qualification, compared with 57% of non-Indigenous adults in the Locality (1% had a degree or higher, compared with 20%).
- ⌘ 94 Indigenous people (2.9% of the Indigenous population) reported that they had a severe or profound disability.
 - Indigenous people had higher disability rates than average in most age groups.
 - the disability rate for Indigenous people aged 55–64 year olds was 2.1 times the average for this age group in Lower Gulf CL.
 - for 65+ year olds, the Indigenous rate was 1.8 times the average in the Locality.
 - 10% of Indigenous adults (aged 15+) gave assistance to a person with a severe disability.
- ⌘ 47% of the Locality's Indigenous households had an internet connection, which was 20% higher than in 2011.

Tracking changes in Lower Gulf CL

In the table below, some indicators of community structure and well-being are calculated for Indigenous people in Lower Gulf CL. The difference or gap between Indigenous and non-Indigenous people in Lower Gulf CL is shown for 2016. Changes in the Indigenous rates are tracked over the past five years and decade.

Indicator	Lower Gulf Commissioning Locality, 2016			Change in Indigenous rate	
	Indigenous	non-Indigenous	Gap in 2016	last 5 years 2011–2016	last decade 2006–2016
home ownership % of households owning/buying their home	6%	42%	-36%	dn 4%	dn 5%
personal income* median weekly income of adults (15+)	\$361	\$906	-60%	up 11%	up 22%
household income median weekly income of households	\$1,041	\$1,448	-28%	up 9%	up 22%
workforce participation % of adults 15+ in labour force	44%	75%	-31%	up 1%	dn 8%
unemployment % of unemployed in workforce	24%	2%	+22%	up 6%	up 17%
employment employed adults as % of population	21%	64%	-42%	dn 1%	dn 11%
pre-school % of infants under 5 in education	16%	25%	-9%	up 4%	up 6%
teenage education % of 15–19 year-olds in education	24%	17%	+8%	up 6%	up 7%
children at school % of 5–14 year olds in education	89%	97%	-8%	up 6%	up 12%
Year 12 completion % of adults (15+) who have left school	16%	46%	-30%	up 2%	up 1%
average schooling average school Year completed	9.8 yrs	10.7 yrs	-90%	0.4 yrs	0.5 yrs
tertiary qualifications % of adults 15+ with a post-school qualification	29%	59%	-30%	up 10%	up 8%
degree % of adults 15+ with a degree or higher qualification	1%	17%	-16%	up 1%	same
postgrad % of adults 15+ with a postgraduate qualification	0%	4%	-4%	up 0%	up 0%
disability* % of people with a severe, long-term disability	2.9%	2.9%	same	up 0%	up 0%

* Personal income and disability data compare Indigenous rates with those of the whole population in Lower Gulf CL.

Indigenous population and growth

In the 2016 Census, the Locality's Indigenous population was counted as 3,236 people, of whom 3,154 identified as Aboriginal and 39 as both Aboriginal and Torres Strait Islander; 33 identified as Torres Strait Islander.

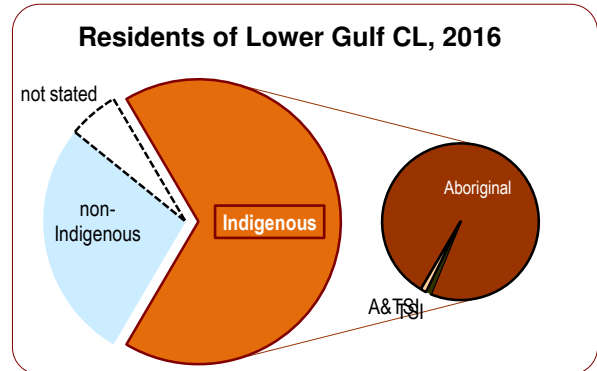

- Indigenous people comprised 66.9% of the Locality's population, compared with 4.0% in Queensland.

5.7% of Lower Gulf CL people did not say whether they had Aboriginal or Torres Strait Islander origins.

- Among the Indigenous people here, there were 102 females per 100 males.

There were 121 males per 100 females among non-Indigenous people.

- The ABS estimates that the net Census undercount rate nationally for Aboriginal and Torres Strait Islander peoples was 17.5% in 2016, meaning one in six was not counted.

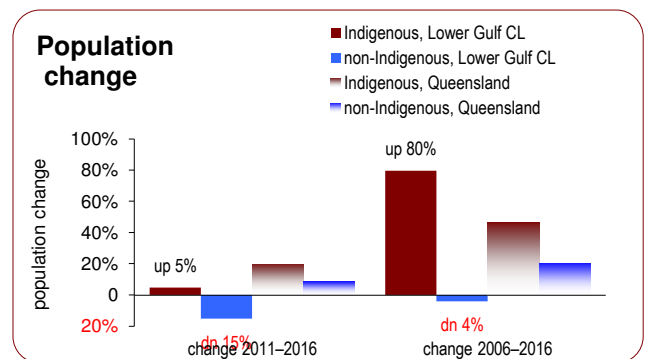

Between 2011 and 2016, the counted Indigenous population in Lower Gulf CL rose by 5% (by 146) from 3,090; in total, the Locality's population fell by 3%.

The number of infants born over the last five years was larger than the population growth, so other age groups had declined in number.

- Between 2006 and 2016, the Locality's Indigenous population rose by 80% (from 1,802 in 2006).

The Locality's non-Indigenous population fell by 4% over the decade.

The Indigenous population counted in Queensland rose by 46% over the decade.

On Census night 2016, 3,034 Indigenous residents of Lower Gulf CL were at home (94%), and 181 were staying away from home (6%). Offsetting those away were 221 Indigenous visitors staying in Lower Gulf CL that night, equivalent to 7% of the Indigenous resident population.

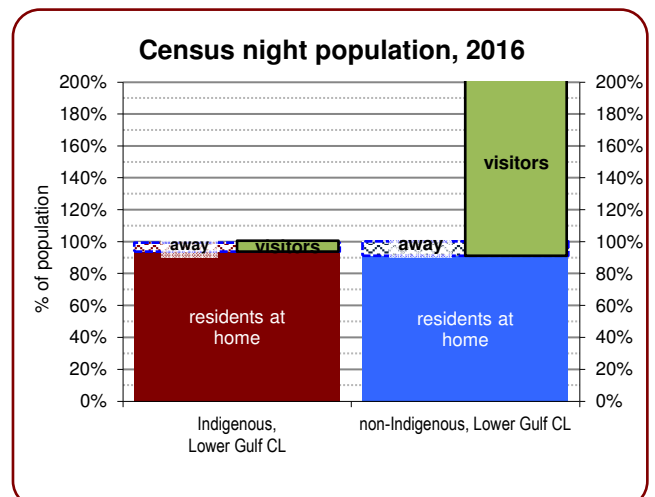

- There were 48 visitors from the same locality (eg. overnighing with neighbours).

71% of the visitors were from Queensland and 5% were from the NT.

- The proportion of Indigenous residents away from home on Census night was 2% lower than in 2011.

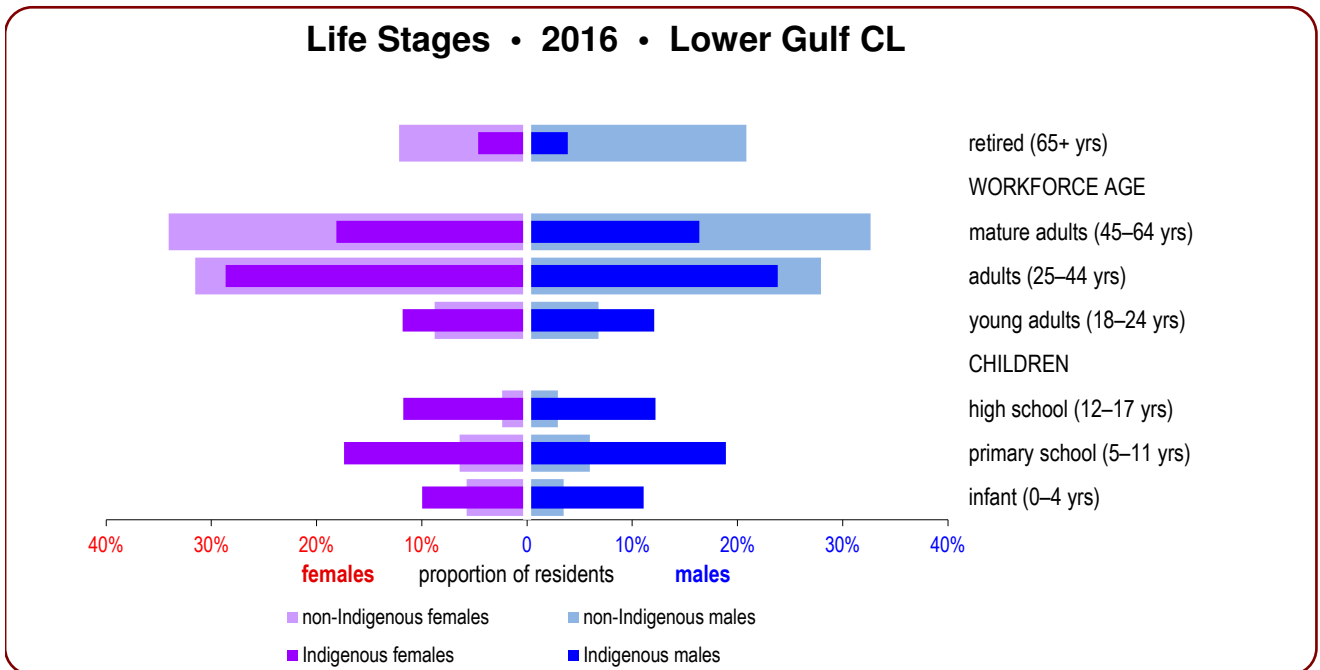

The proportion away from home was 3% lower than for non-Indigenous residents here; it was 1% lower than for Indigenous residents of Queensland.

- There were 39 more Indigenous visitors than in 2011, when there were 182, equal to 6% of the Indigenous population.

Life stages

The Indigenous population of Lower Gulf CL had a much smaller proportion in the working stage of life (15–64 years) than the non-Indigenous population, with a much higher proportion of children under 15 and a much smaller proportion of people aged 65 or older.

In the Locality's Indigenous population in 2016:

⌘ 1,789 people (55% or over five in ten) were adults aged 18–64.

- 381 (or 12%) were aged 18–24
- 851 (or 26%) were aged 25–44
- 557 (or 17%) were aged 45–64

The number of adults aged 18–64 was up 6% from 2011; and up 71% from 2006.

⌘ 1,322 Indigenous residents (41% or four in ten) were children under 18.

- 346 (or 11%) were under five
- 587 (or 18%) were aged 5–11
- 389 (or 12%) were aged 12–17

The number of children was up 4% since 2011; and up 98% since 2006.

⌘ 137 of Indigenous residents were aged 65+ years (4% of the total).

The number aged 65+ had risen by 11% since 2011; it was 61% higher than in 2006.

The proportion aged 18–64 among Indigenous people was 13% lower than for non-Indigenous (69%).

5% more of the Indigenous population were young adults (18–24 yrs), and 14% fewer were mature adults (45–64 yrs), compared with the non-Indigenous population of the Locality.

Those aged 18–64 made up 54% of the Indigenous community in Queensland; their number had risen by 23% from 2011.

The proportion of Indigenous children in Lower Gulf CL was 27% higher than the average for non-Indigenous people.

In Queensland, 42% of the Indigenous community were children under 18; the number was up 13% since 2011.

18% of non-Indigenous people in Lower Gulf CL were aged 65+.

Across Queensland, 4% of Indigenous people were aged 65+; their number had risen by 54% since 2011, and by 114% since 2006.

Age profile

The Indigenous population of Lower Gulf CL has an age profile that is significantly younger than the non-Indigenous population, with a much lower median age (23 vs 44 years).

For the Locality's Indigenous population in 2016:

- ⌘ The average age was 27 years in 2016, with half the population aged under 23 years (the median age).
The largest 5-year age groups were 5–9 years (13%), 10–14 years (12%) and 0–4 years (11%).
- ⌘ The median age was similar to in 2011 and 2 years lower than in 2006.

Proportionally, the biggest increases since 2011 were of 55–59 year olds (47% more), 15–19 year olds (25% more) and 20–24 year olds (23% more).

- ⌘ 137 Indigenous people (4%) were aged 65+ years, compared with 18% of non-Indigenous residents.
- ⌘ There were noticeably more males than females aged 60–64 years, 10–14 years and 0–4 years.

The average age was 16 years younger than for the non-Indigenous residents; the median age was 21 years younger.

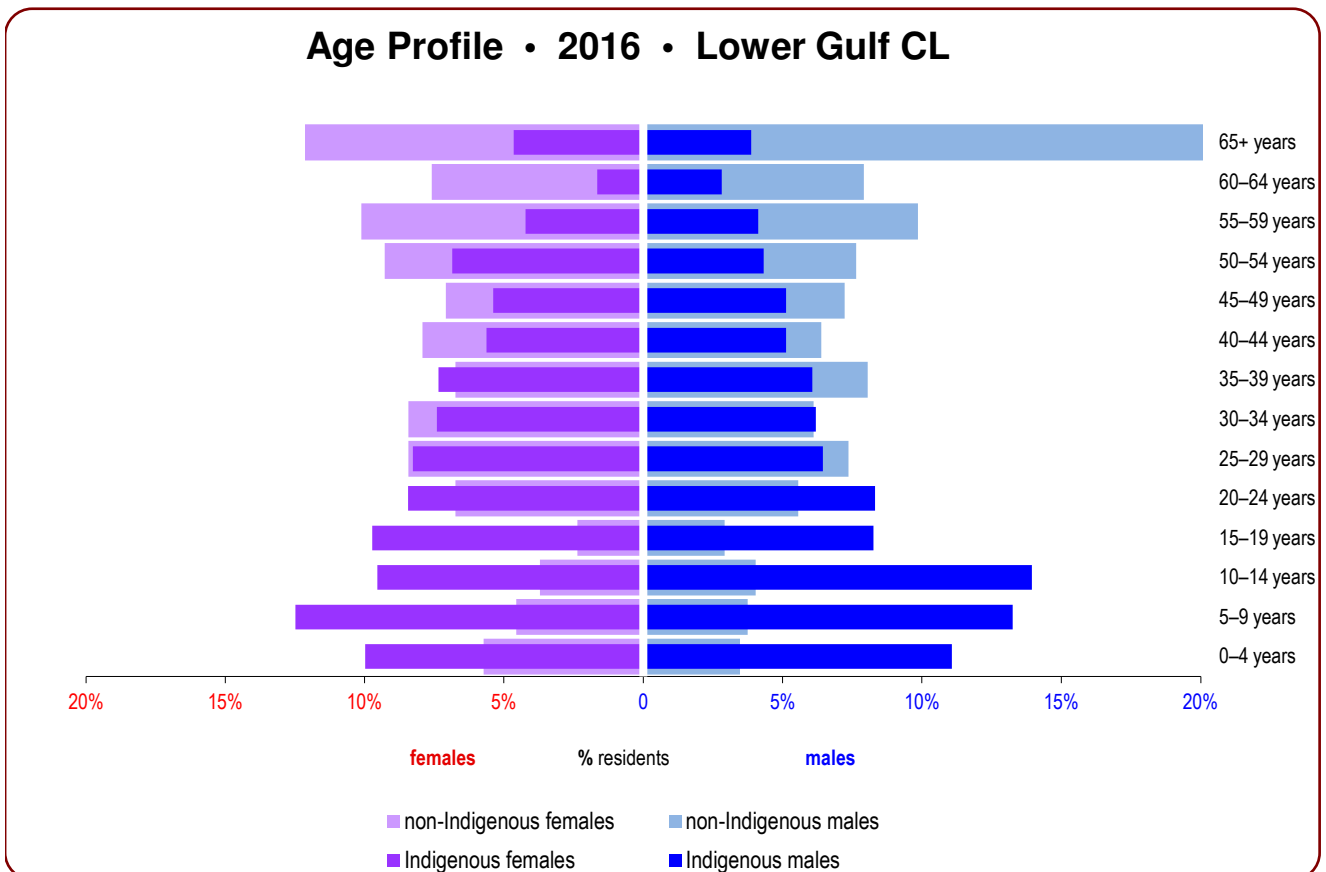

Non-Indigenous population: about 5% were 5–9 years, 4% were 10–14 years and 5% were 0–4 years.

The median age of Indigenous people in Queensland had risen by 2 years since 2011, but had changed little since 2006.

Among the State's Indigenous population, the increases since 2011 were: 55–59 year olds (41%); 15–19 year olds (15%); and 20–24 year olds (29%).

The number aged 65+ was 11% higher than in 2011; the percentage of people this age was little changed since 2011, when it was 4%.

There were many more females than males among those aged 50–54 years, and those aged 25–29 years and 35–39 years.

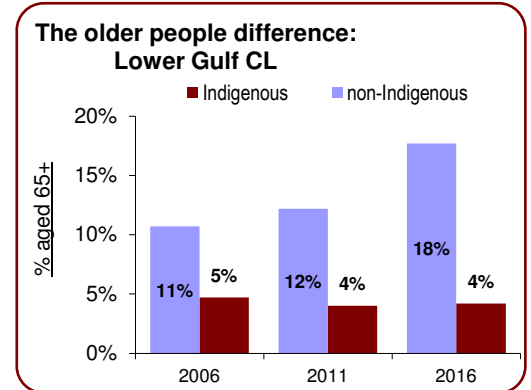

Population Indicators

The older people difference

% aged 65+ in population

Commonly, Indigenous communities have a lower proportion of people aged over 65, due to a shorter average life-span and higher birth rates.

- ⌘ In 2016, 4.2% of the Locality's Indigenous residents were aged 65 or over, compared with 17.7% of non-Indigenous residents. The older people difference was -14%.
- ⌘ The older people difference had increased by 5% since 2011, after having increased by 2% over the previous five years.
- ⌘ The older people difference in Queensland was -11%. It had widened by 1% since 2011 and widened by 1% over the previous five years.

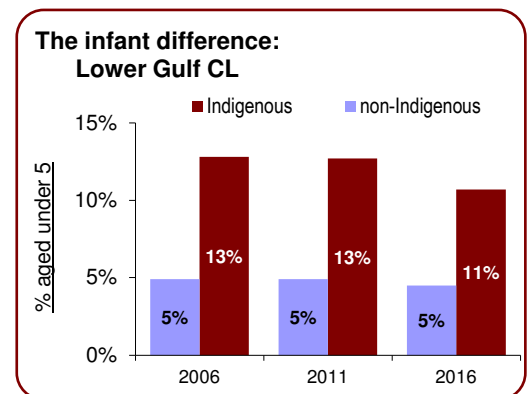

The infant difference

% aged under 5 in population

Indigenous communities generally have a higher proportion of young people due to larger families and fewer older people.

- ⌘ In 2016, 10.7% of the Locality's Indigenous residents were infants, compared with 5% of non-Indigenous residents. The infant difference was +6%.
- ⌘ The infant difference had closed by 2% since 2011, after having changed little over the previous five years.
- ⌘ The infant difference in Queensland was +6%. It had closed by 1% since 2011 and changed little over 2006 to 2011.

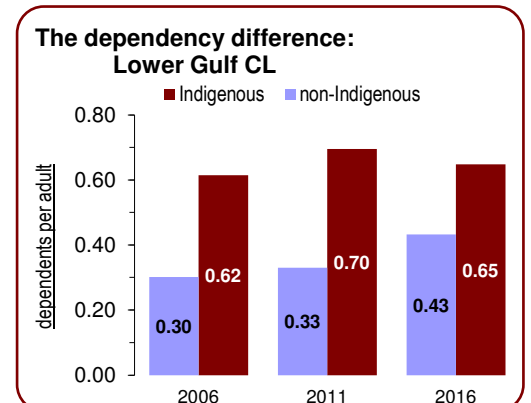

The dependency difference

ratio of dependents to working age adults

The dependency ratio is the average number of people of dependent age (under 15 or 65+) for each person of working age. The national average is 0.5 dependents per adult. A higher ratio means each person of working age has more dependents to support, on average.

- ⌘ In 2016, the Locality's Indigenous community had a dependency ratio of 0.65, compared with 0.43 for the non-Indigenous community. The Indigenous dependency ratio was 0.22 higher.
- ⌘ The dependency difference had decreased by 0.15 since 2011, after having widened by 0.06 over the previous five years.
- ⌘ The dependency difference in Queensland was 0.14 and had closed by 0.06 since 2011. It had closed by 0.04 over 2006 to 2011.

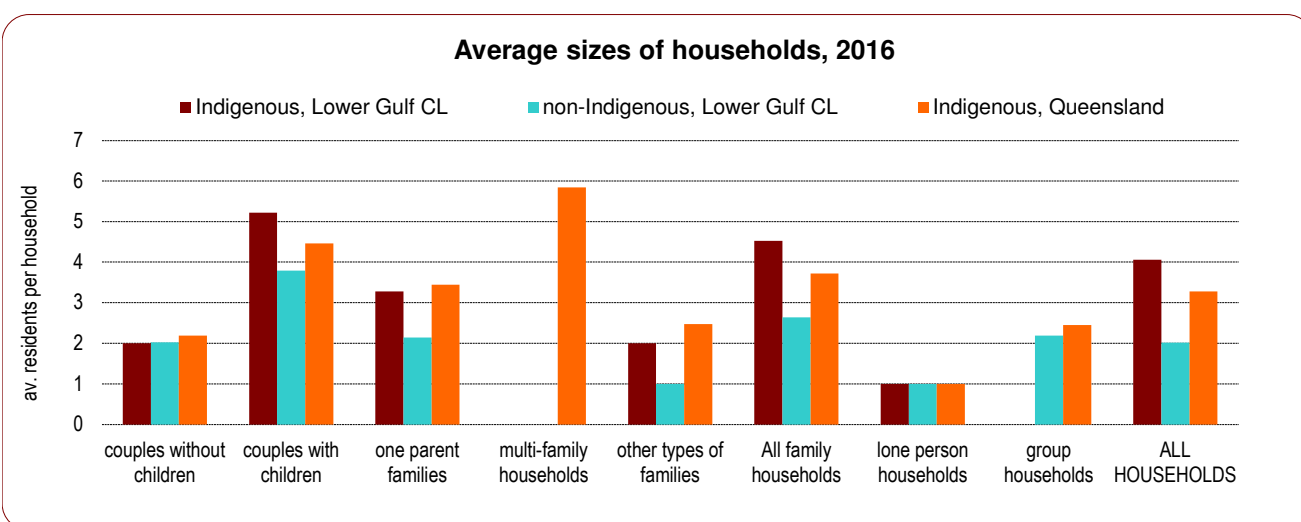

Household types and sizes

In 2016, the 3,236 Indigenous residents of Lower Gulf CL were living in 717 households, 16% more than in 2011

The main types of Indigenous households* in the Locality in 2016 were:

- ⌘ Three in ten were couples with children (228 households, or 32%). 14% higher than non-Indigenous here
- ⌘ One in five were one parent families (152 households, or 21%). 17% more than non-Indigenous
- ⌘ One in six were multi-family households (123 households, or 17%). 17% more than non-Indigenous
- ⌘ One in eight were one-person households (94 households, or 13%). 26% less than non-Indigenous
- ⌘ There were 90 couples without children, and 18 other types of households.

* Indigenous households are those with at least one Indigenous resident.

The Locality's Indigenous households had an average of 4.1 residents in 2016, which was 0.3 lower than in 2011, and 0.1 lower than in 2006.

- ⌘ Indigenous households here were 0.8 persons larger than in Queensland, which averaged 3.3 residents.
- ⌘ The average size of non-Indigenous households in the Locality was 2.0 residents; Indigenous households were 102% larger, on average.
- ⌘ The larger average size of Indigenous households was partly due to lower proportions of people living alone.
- ⌘ Indigenous couple families here had an average of 3.2 children, compared with 1.8 for non-Indigenous families. Indigenous families in Queensland averaged 2.5 children.
- ⌘ Indigenous one-parent families here averaged 2.3 children compared with 2.4 in Queensland (non-Indigenous one-parent families here had 1.1).
- ⌘ At an average size of 4.1 persons, the 717 Indigenous households had some 2,900 members, but only 2,989 Indigenous people were counted in these households.

The average size of the State's Indigenous households was down by 0.1 since 2011.

The average size of non-Indigenous households changed little from 2011.

Indigenous households: 13% lone person; Other households: 39%.

The average size of Indigenous nuclear families was little changed since 2011. It was up by 0.2 from 2006.

The average number of children in one-parent families was down by 0.8 since 2011. It was down by 0.7 since 2006.

This suggests that a few people in the Locality's Indigenous households (almost one in a thousand) did not identify as Indigenous in the Census.

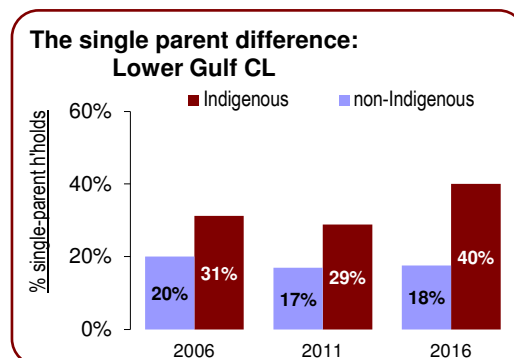

Household Indicators

The single parent difference

% of families with children having one parent

Single parent families often have low incomes because it is difficult for the parent to work without adequate child care and support. High proportions of one-parent families can indicate a higher need for support services.

- ⌘ In 2016, 40% of the Locality's Indigenous family households with children had one parent, compared with 18% of non-Indigenous families. The difference was +23%.
- ⌘ The single parent difference had increased by 11% since 2011, after having increased by 1% over the previous five years.
- ⌘ The single parent difference in Queensland was +19%. It had changed little since 2011 after having increased by 1% over 2006 to 2011.

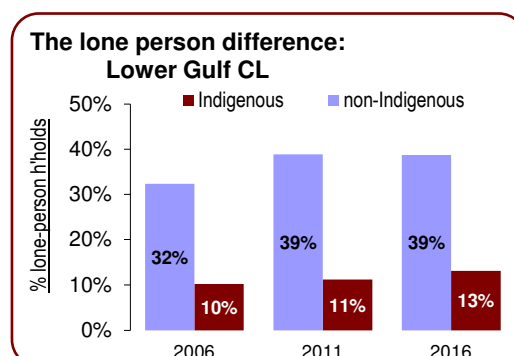

The lone person difference

% of households with one person

Living alone is less common for Indigenous people than for others, so most communities have a large lone person difference. The difference is influenced locally by the availability of small dwellings.

- ⌘ In 2016, 13% of the Locality's Indigenous households were lone persons, compared with 39% of non-Indigenous households. The lone person difference was -26%.
- ⌘ The lone person difference had reduced by 2% since 2011, after having widened by 6% over the previous five years.
- ⌘ The lone person difference in Queensland was -10% and had closed by 1% since 2011. It had changed little between 2006 and 2011.

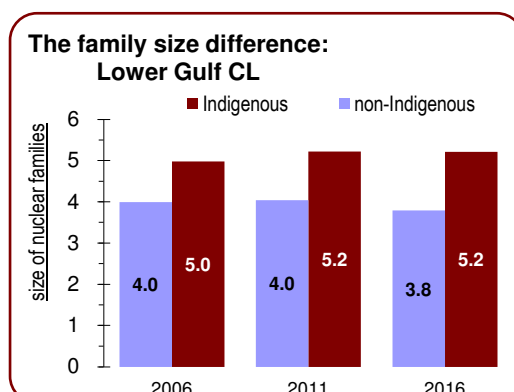

The family size difference

average size of two-parent families

The family size difference is the gap between the average sizes of Indigenous and non-Indigenous 'nuclear families' (couples with children). Larger families have to spread their income among more members, so living standards tend to be lower.

- ⌘ In 2016, the average size of the Locality's Indigenous nuclear families was 5.2 persons (i.e. 3.2 children), compared with 3.8 persons (1.8 children) for non-Indigenous families, a difference of +1.4 children per family.
- ⌘ The family size difference had widened by 0.2 since 2011, after having widened by 0.2 over the previous five years.
- ⌘ The family size difference in Queensland was 0.5 children per family, and had decreased by 0.1 since 2011. It had increased by 0.1 from 2006 to 2011.

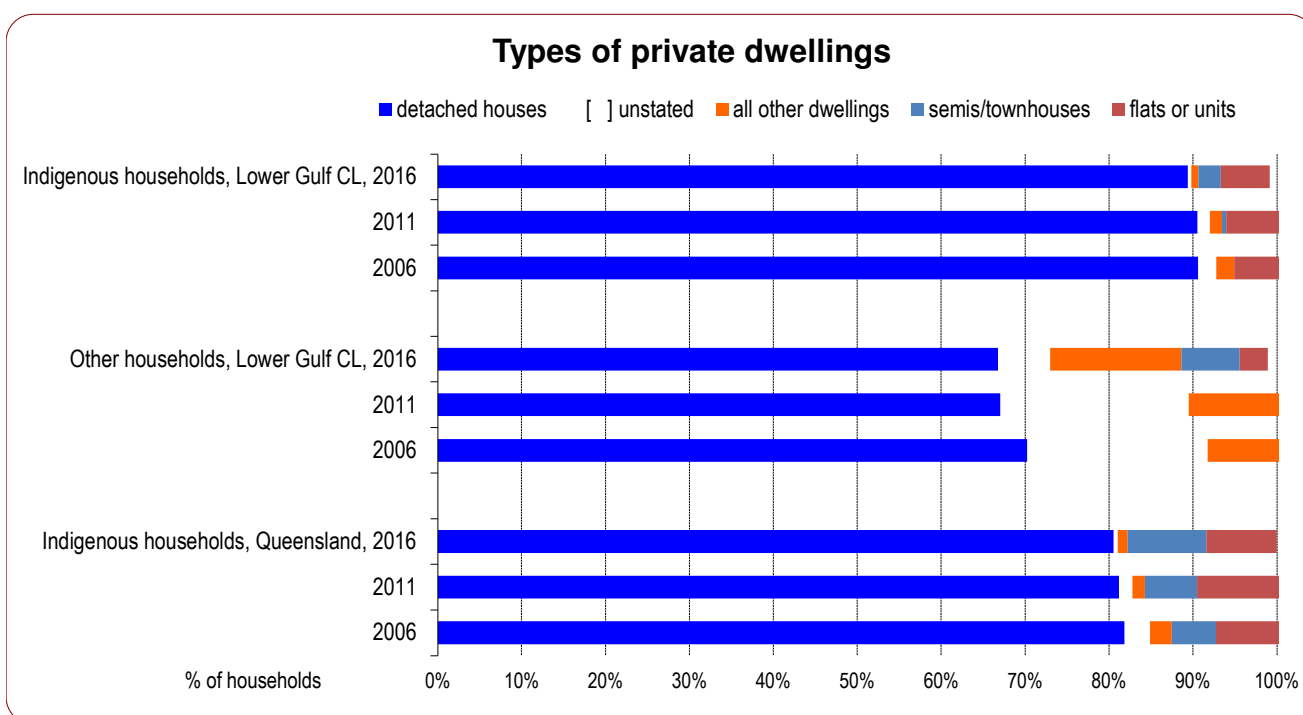

Types of housing

In 2016, most Indigenous households in Lower Gulf CL (89%) were living in detached houses, with 6% living in flats or units and 3% living in semis/townhouses.

- ⌘ Compared with other households in Lower Gulf CL, 23% more Indigenous households lived in detached houses, and 13% fewer lived in caravans or cabins.
- ⌘ The proportion of Indigenous households living in detached houses in Lower Gulf CL was down by 1% since 2011, and was 1% lower than in 2006.

The proportion in detached houses was 9% more than that of Indigenous households in Queensland; the proportion in semis/townhouses was 7% lower.

The proportion of non-Indigenous households in detached houses in Lower Gulf CL was little changed since 2011 and down by 3% since 2006.

35 Indigenous people in the Locality (1%) were counted living in institutional accommodation on Census night (eg. nursing homes, hospitals, boarding houses, correctional centres, barracks or boarding schools).

- ⌘ There were 57 Indigenous people living in institutional accommodation in Lower Gulf CL in 2011, and 97 in 2006.
- ⌘ There were 1.2 males per female among Indigenous people in institutional accommodation.

In 2016, there were 193 people living in institutional accommodation in Lower Gulf CL; 8% of the non-Indigenous population lived in institutions.

Note: very small numbers are randomly altered by the ABS to protect privacy, so are not precise.

7 Indigenous people were reported living in improvised accommodation (eg. shacks, tents or sleeping out) in the Locality on Census night.

- ⌘ This was up by 7 since 2011.

There were 15 non-Indigenous people reported in improvised accommodation in Lower Gulf CL in 2016.

Housing costs and tenure

In 2016, Indigenous households in Lower Gulf CL most commonly lived in dwellings that were rented (90% of the households). Another 4% lived in dwellings that were fully owned, and 2% in homes that were being purchased.

⌘ The proportion of Indigenous households that rented, 90%, was 46% higher than the rate for other households here.

The proportion living in rented dwellings was up by 6% since 2011, and was 9% higher than in 2006.

The median weekly rent paid by Indigenous households was \$132. It was \$103 in 2011 and \$71 in 2006.

⌘ The proportion living in dwellings that were being bought (2%) was 7% lower than for Other households.

The proportion living in mortgaged dwellings was down by 5% since 2011; and 4% lower than in 2006.

The median monthly mortgage paid by Indigenous households in the Locality in 2016 was \$997. It was \$621 in 2011 and \$625 for 2006.

⌘ The proportion of Indigenous households in fully owned dwellings (4%) was 29% lower than for non-Indigenous households.

The proportion in fully owned dwellings was up by 1% since 2011; and 1% lower than in 2006.

Among Indigenous households, the proportion renting in Lower Gulf CL was 28% higher than the rate in Queensland.

43% of Other households in Lower Gulf CL were renting, 6% lower than in 2011, and 3% lower than in 2006.

The median weekly rent paid by Other households in Lower Gulf CL was \$71. It was \$54 in 2011 and \$43 in 2006.

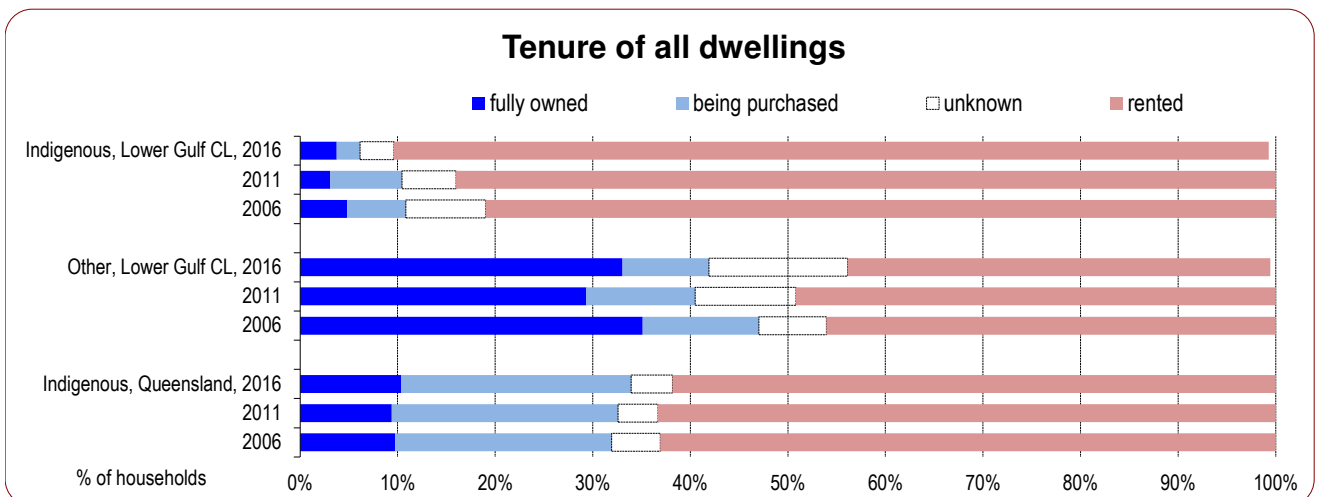

In Queensland, 24% of Indigenous households were home-buyers with a mortgage.

9% of the Other households in Lower Gulf CL had a mortgage, down by 2% since 2011, and down by 3% since 2006.

The median mortgage paid by Other households in Lower Gulf CL was \$1,000. It was \$941 in 2011 and \$901 in 2006.

The proportion of Indigenous households in fully owned dwellings in Lower Gulf CL was 7% less than the average in Queensland.

The proportion of Other households in fully owned dwellings in Lower Gulf CL was up by 4% since 2011, and down by 2% since 2006.

Of 643 Indigenous rental households, 80% were managed by public housing and 9% were managed by community housing.

⌘ 516 Indigenous households lived in public housing (72% of all households).

This number had risen by 160 since 2011.

Only 6% of the Other households lived in public housing. Indigenous households occupied 94% of public housing.

The number of Other households in public housing in Lower Gulf CL was little changed.

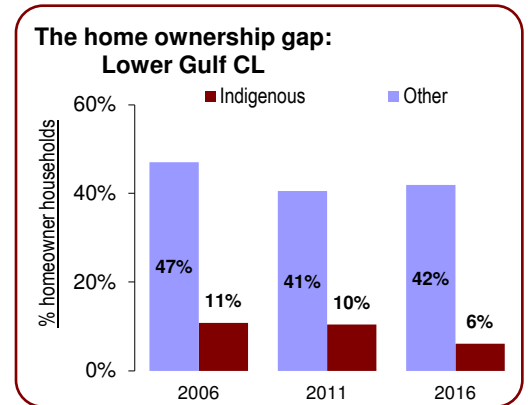

Housing Indicators

The home ownership gap

% of households owning/buying their home

Ownership of a home is the main way that most Australians accumulate wealth and ensure secure accommodation.

- ⌘ In 2016, 6% of Indigenous households in Lower Gulf CL were either buying or owned their home, compared with 42% of Other households, a home ownership gap of -36%.
- ⌘ The gap had widened by 6% since 2011, after having closed by 6% over the previous five years.
- ⌘ The home ownership gap in Queensland was -30% and had closed by 2% since 2011. It had closed by 3% between 2006 and 2011.

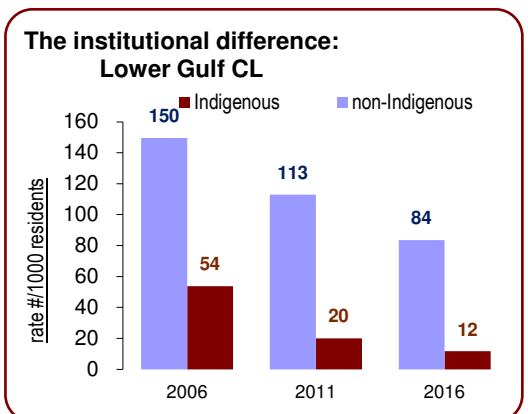

The institutional difference

rate per 1000 of residents in non-private dwellings

Differences in proportion of people in institutional accommodation will reflect the nature and extent of these institutions in the area – they might include hotels, boarding houses, nursing homes, correctional centres, barracks or hospitals.

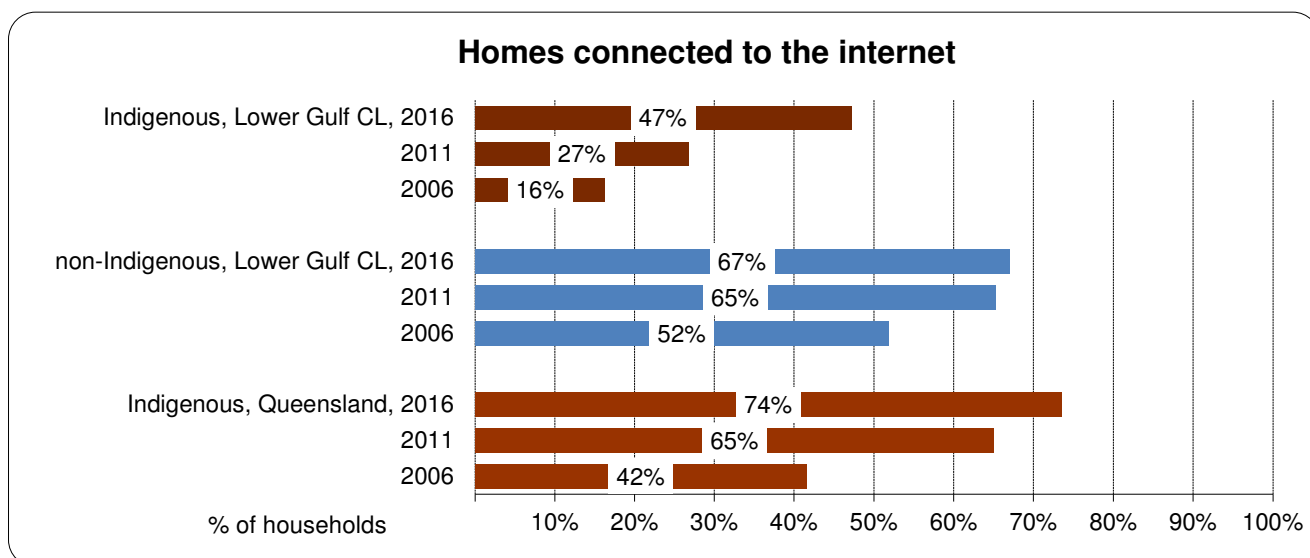

- ⌘ In 2016, there were 12 in every 1000 Indigenous residents in Lower Gulf CL living in institutional housing, compared with 84 per 1000 non-Indigenous residents. The institutional difference was -72 per 1000.
- ⌘ The institutional gap had decreased by 21 per 1000 since 2011, after having decreased by 3 per 1000 over the previous five years.
- ⌘ The institutional difference in Queensland was 15 per 1000 and had increased by 1 per 1000 since 2011. It had fallen by 1 per 1000 between 2006 and 2011.

Internet @ home

In 2016, 47% of Indigenous households in Lower Gulf CL had an internet connection while 49% did not (351 households); 3% did not answer the question.

- ⌘ The proportion of Indigenous households connected to the internet was 26% lower than in Queensland (74% connected), ... and 20% lower than non-Indigenous households in Lower Gulf CL (where 67% of homes were connected).
- ⌘ The proportion of Indigenous households with internet was up by 20% from 27% in 2011. The proportion was up by 8% for Indigenous households in Queensland. It was unchanged for non-Indigenous households in this Locality (from 65% in 2011).
- ⌘ In 2006, 16% of the Locality's Indigenous people had the internet at home. This compared with 42% of Indigenous people in Queensland and 52% of non-Indigenous people in this Locality.

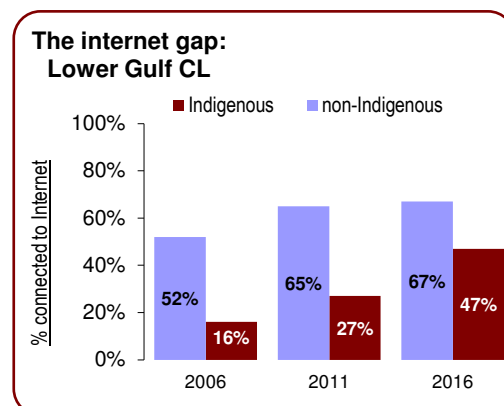

The internet gap

% of households with an internet connection

The internet is increasingly important as a source of communication and exchange, and is becoming an essential service.

- ⌘ In 2016, 47% of the Locality's Indigenous households had an internet connection, compared with 67% of other households, an internet gap of -20%.
- ⌘ The internet gap had closed by 18% since 2011, after having widened by 2% over the previous five years.
- ⌘ The internet gap in Queensland was 10% and had narrowed by 4% since 2011. It narrowed by 7% between 2006 and 2011.

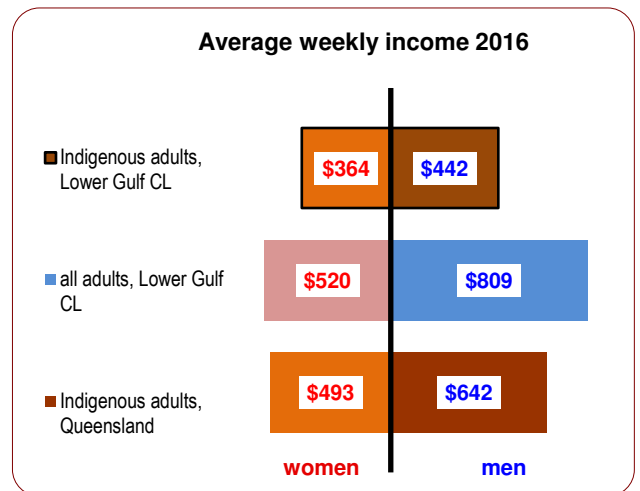

The 2006, 2011 and 2016 Censuses had different questions about the internet.

Personal income

In 2016, the average weekly income of Indigenous adults (aged 15+) in Lower Gulf CL was about \$451, which was 25% less than that of Indigenous adults in Queensland (\$597), and 41% less than the average of all adults in the Locality (\$762).

- ⌘ Indigenous men in Lower Gulf CL averaged \$442 a week (55% of the overall male average here). Indigenous women averaged \$364 a week (70% of the overall female average).
- ⌘ The average weekly income of Indigenous men was \$200 lower in the Locality than in Queensland. The average weekly income of Indigenous women here was \$129 lower than in Queensland.
- ⌘ Half of the Indigenous adults received under \$361 a week (the median income).

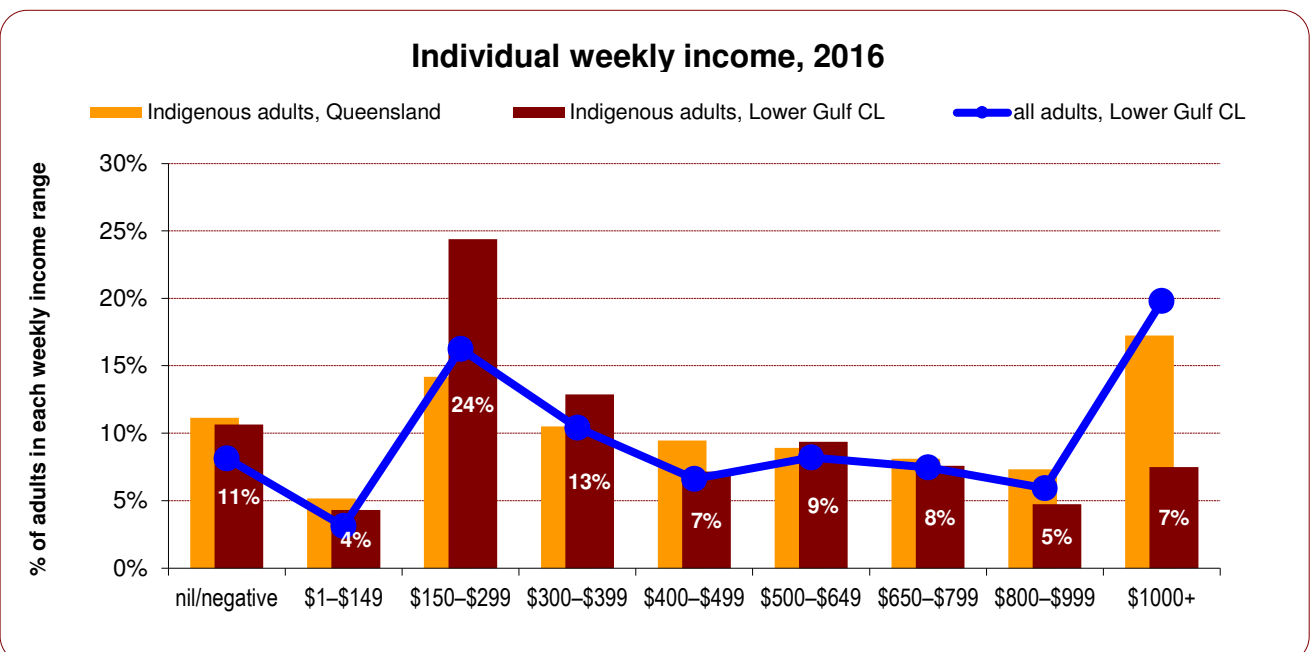

The income distribution pattern among Indigenous adults in Lower Gulf CL was slightly different from Indigenous adults in Queensland; it was somewhat different from all adults in the Locality.

Compared with Indigenous adults across Queensland:

- ⌘ proportionally more Indigenous adults here were in the \$150–\$299 and \$300–\$399 ranges.
- ⌘ fewer were in the \$1000+ and \$800–\$999 ranges, and in the \$400–\$499 range.

Compared with all adults in this Locality:

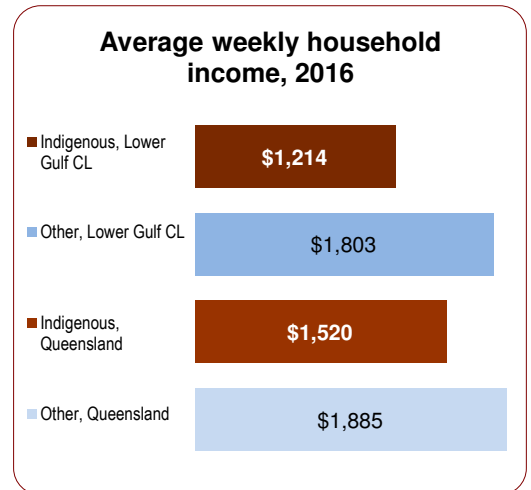

- ⌘ more Indigenous adults were in the \$150–\$299 and nil/negative ranges, and in the \$300–\$399 range.
- ⌘ proportionally fewer were in the \$1000+ range.

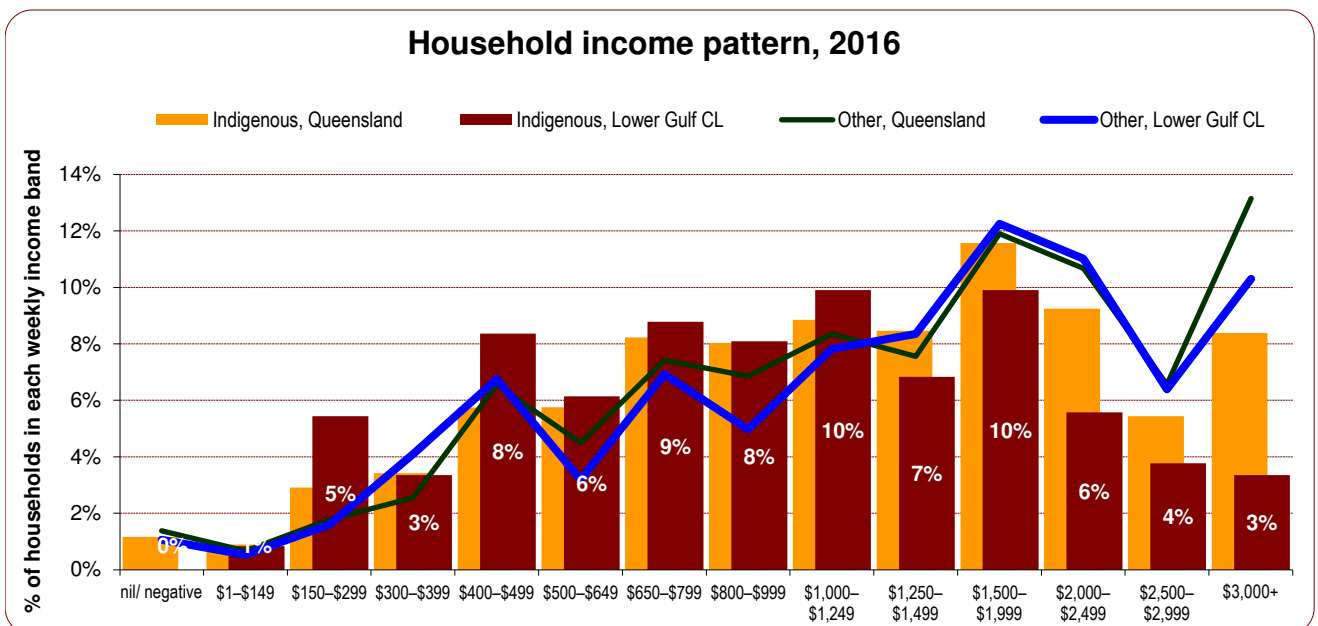

Household income

In 2016, the average income of 702 Indigenous households in Lower Gulf CL was about \$1,214 a week. Household income is not a strong indicator of well-being because the benefit the income gives household members is affected by the household's size.

- ⌘ The average Indigenous household income in Lower Gulf CL was 20% less than the average of Indigenous households in Queensland (\$1,520 a week).
- ⌘ It was 33% less than the average of other households in Lower Gulf CL – \$1,803 a week.
- ⌘ Half the Indigenous households received less than \$1,041 a week (the 'median household income').
- ⌘ Indigenous households in the Locality had an average size of 4.1 residents, compared with 2.0 for non-Indigenous households. Household incomes thus had to be spread among many more people, compared to other households.

The income distribution pattern among Indigenous households in Lower Gulf CL was slightly different from the State's Indigenous households, and partly different from other households in the Locality.

Compared with Indigenous households across Queensland:

- ⌘ more Indigenous households here were in the \$400–\$499 and \$150–\$299 income ranges.
- ⌘ fewer Indigenous households were in the \$3,000+ and \$2,000–\$2,499 income ranges.

Compared with non-Indigenous households in this Locality:

- ⌘ more Indigenous households were in the \$150–\$299 and \$800–\$999 income ranges, and in the \$500–\$649 and \$1,000–\$1,249 ranges.
- ⌘ fewer Indigenous households were in the \$3,000+ and \$2,000–\$2,499 income ranges, or in the \$2,500–\$2,999 and \$1,500–\$1,999 ranges.

Income Indicators

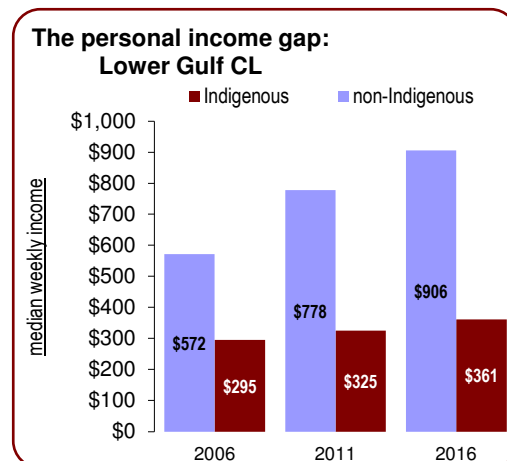

Note: these indicators are based on a small number so are not precise.

The personal income gap

median weekly income of adults (15+)

Income is a major contributor to well-being. One indicator of disadvantage is a low median income – the amount which fewer than half the people earn.

- ⌘ In 2016, the median income of 2,097 Indigenous adults in Lower Gulf CL was \$361, which was 40% that of non-Indigenous adults here (\$906). The personal income gap was -60%.
- ⌘ The personal income gap had widened by 2% since 2011, after having widened by 10% over the previous five years.
- ⌘ The personal income gap in Queensland was -32% and had narrowed by 3% since 2011. It had increased 1% between 2006 and 2011.

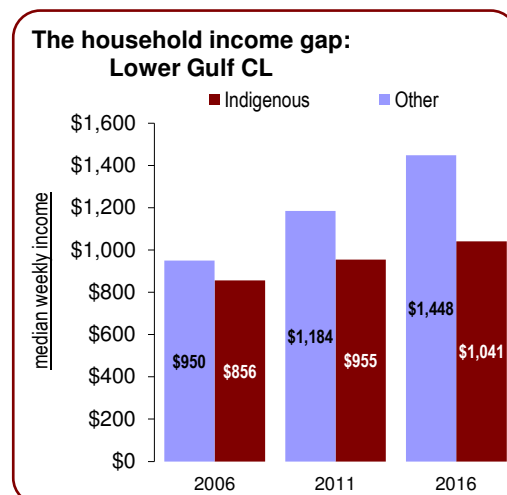

The household income gap

median weekly income of households

Another indicator of disadvantage is a low median household income; half of all households receive less than this amount. However, Indigenous households tend to be larger, with more dependents, so household income does not reflect disadvantage as well as individual income does.

- ⌘ In 2016, the median income of 702 Indigenous households in Lower Gulf CL was \$1,041, compared with \$1,448 for Other households in the Locality. This was 28% lower – this is the household income gap.
- ⌘ The household income gap had widened by about 9% since 2011, after having widened by about 9% over the previous five years.
- ⌘ The household income gap in Queensland was 13% and had closed by 1% since 2011. It had increased by 1% between 2006 and 2011.

[‘Other’ households are those that did not include any Indigenous people AND households that did not say.]

Employment

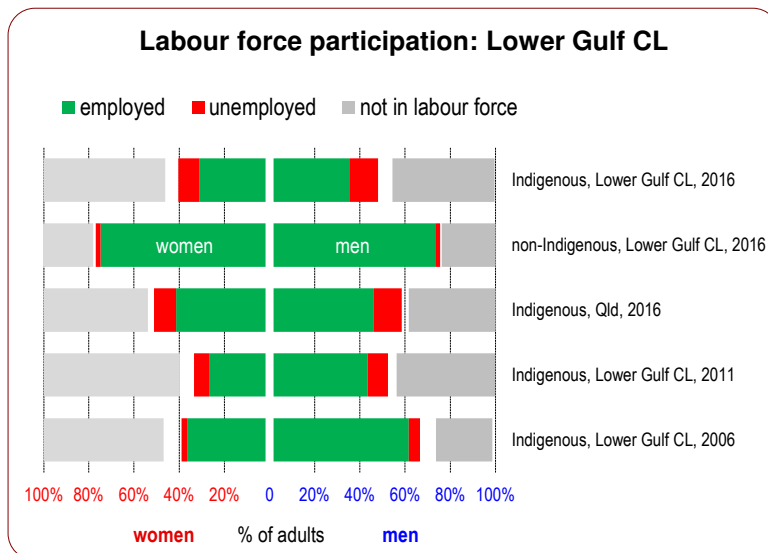

Employment is a prime determinant of a community's income, so it is an important indicator of well-being. In Lower Gulf CL, 692 out of 2,097 Indigenous adults (15+) were employed in 2016 – 33% of adults.

The workforce participation rate (employed + unemployed) was 44% of all Indigenous adults aged 15+.

Indigenous workforce participation was ...

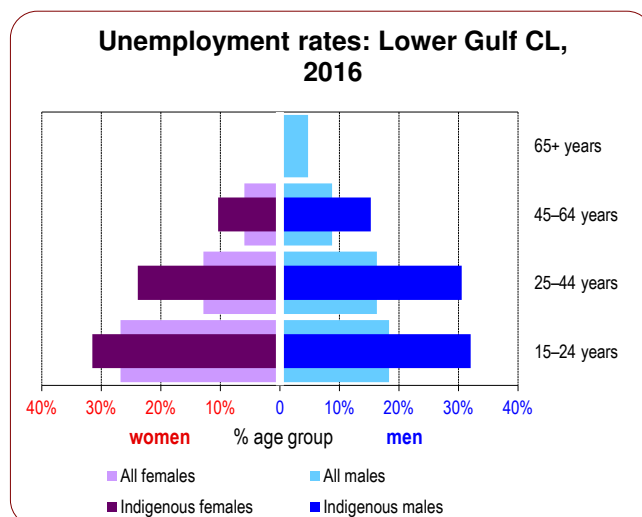

- ⌘ lower for women at 40% than for men at 48%.
- ⌘ 31% lower than the average for non-Indigenous adults in the Locality.
- ⌘ 11% lower than the average for Indigenous adults in Queensland.

The Indigenous workforce participation rate here was similar to 2011 and 8% lower than in 2006.

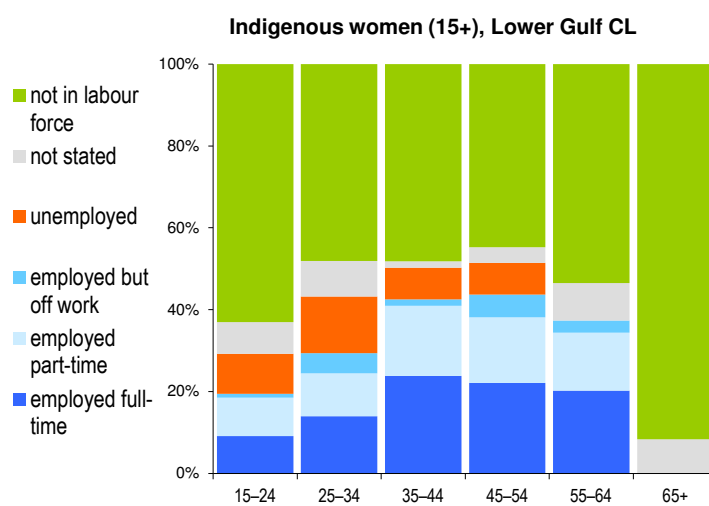

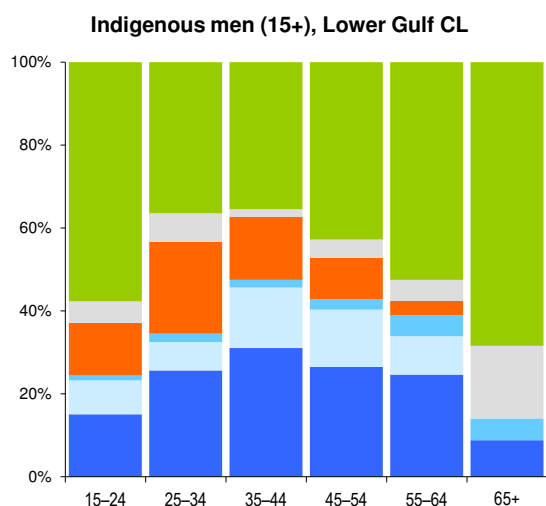

In 2016, the Indigenous unemployment rate in Lower Gulf CL was 24%, with 224 people out of work.

- ⌘ This rate was much higher than the 2% rate among non-Indigenous adults here.
- ⌘ The Indigenous unemployment rate was 27% for men and 23% for women.
- ⌘ The Indigenous unemployment rate was 6% higher than in 2011, and 17% higher than in 2006.
- ⌘ Indigenous unemployment was highest among those aged 15–24 years (29%) and 25–44 years (28%). It was lowest among those aged 45–64 years (16%).

These graphs show the employment patterns for men and women, by age, in 2016.

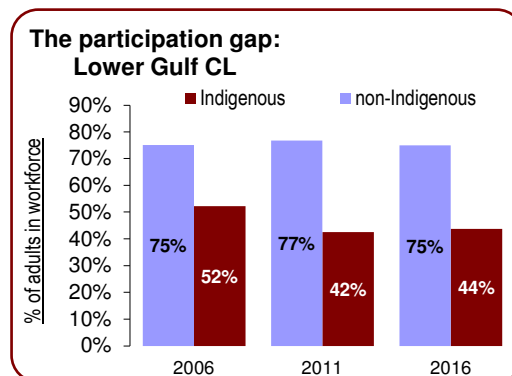

Workforce Gap Indicators

The participation gap

% of adults 15+ in labour force

Workforce participation, measured as the proportion of adults in the workforce, is an important indicator of a community's income and independence. When participation is low, communities become more dependent on income support, and poverty increases.

- ⌘ In 2016 in Lower Gulf CL, there were 917 Indigenous people in the workforce, 44% of the adult residents. The proportion of non-Indigenous adults in the workforce was 75%, so the participation gap was -31%.
- ⌘ The participation gap had closed by 3% since 2011, after having widened by 11% over the previous five years.
- ⌘ The participation gap in Queensland was -11% and had changed little since 2011. It had widened by 2% between 2006 and 2011.

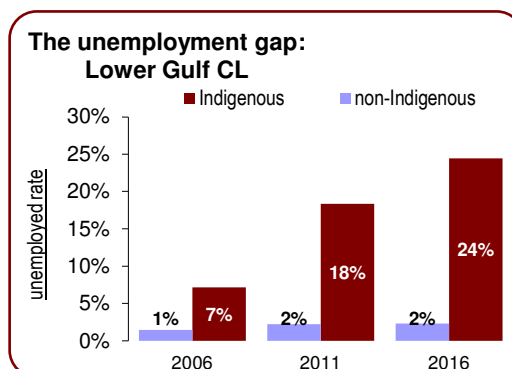

The unemployment gap

% of unemployed in workforce

High unemployment indicates an absence of jobs in occupations for which local people have had training. High unemployment rates have many damaging effects on those unemployed and their community.

- ⌘ In 2016, 24% of the Indigenous workforce in Lower Gulf CL were unemployed (224 people), and 2% of the non-Indigenous workforce were unemployed. The unemployment gap was +22%.
- ⌘ The unemployment gap had widened by 6% since 2011, after having widened by 10% over the previous five years.
- ⌘ The unemployment gap between in Queensland was +13% and had widened by 1% since 2011. It had widened by 3% between 2006 and 2011.

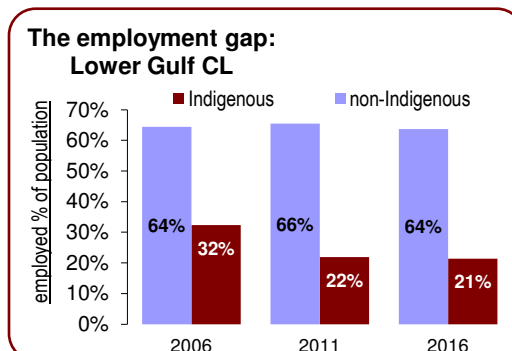

The employment gap

employed adults as % of population

A useful indicator of the financial strength of a community is the proportion of the total population who are employed. A lower proportion means that, on average, each employed person has more people to support.

- ⌘ In 2016, 21% of the Indigenous population of Lower Gulf CL were employed (692 people), and 64% of the non-Indigenous workforce were employed. The employment gap was -42%.
- ⌘ The employment gap had closed by 2% since 2011, after having widened by 12% over the previous five years.
- ⌘ The employment gap in Queensland was -21% and had closed by 1% since 2011. It had widened by 2% between 2006 and 2011.

Education participation by age

Having high proportions of people in education is a good indicator of positive individual and community development. In Lower Gulf CL, one in four Indigenous residents (841 people) was attending an educational institution in 2016.

Indigenous participation in education varied with age. In education in Lower Gulf CL were:

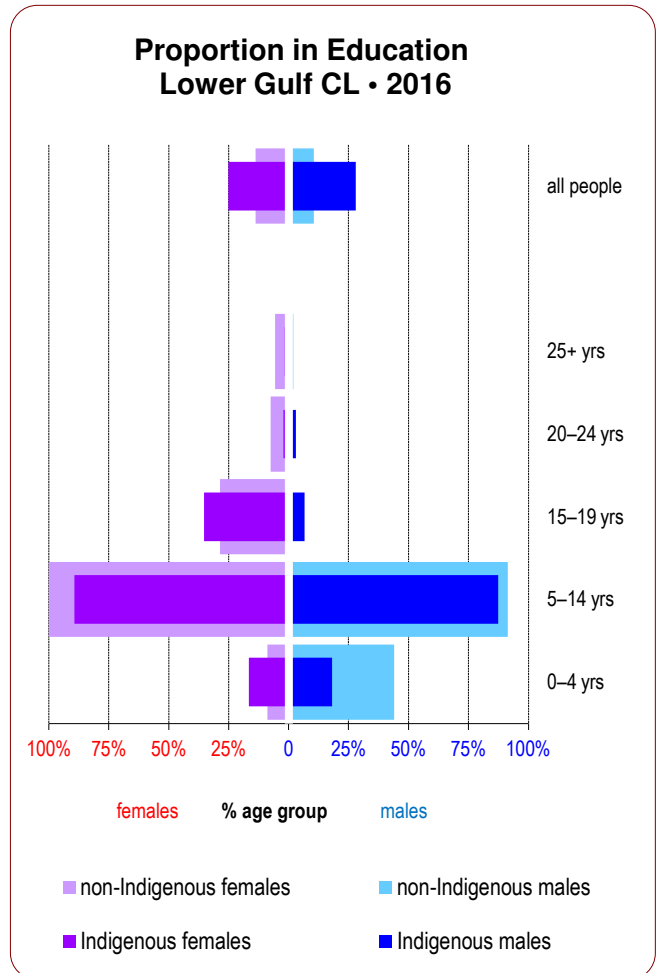

- 16% of the 0–4 year olds
- 89% of the 5–14 year olds
- 24% of the 15–19 year olds
- 1% of the 20–24 year olds
- 1% of those aged 25+.

Overall participation in education by Indigenous residents here, 26%, is much higher than for non-Indigenous, 13%. This is partly because the Indigenous population has a much higher proportion of children under 18. Relative to non-Indigenous people of the same age, there were, in education:

- 3% fewer Indigenous 25+ year olds
- 6% fewer Indigenous 20–24 year olds
- 8% more Indigenous 15–19 year olds
- 8% fewer Indigenous 5–14 year olds
- 9% fewer Indigenous 0–4 year olds

Lower Gulf CL's Indigenous population had 109 males per 100 females in education. This ratio varied with age. Of those in education, there were:

- 1.2 males per female among 0–4 year olds
- 1.2 males per female among 5–14 year olds
- 2.4 females per male among 15–19 year olds
- too few to be sure for 20–24 year olds
- 3.5 females per male among 25+ year olds

Since 2011, overall participation in education by Indigenous people in Lower Gulf CL had increased by 2%, but this masks changes among the age groups.

- The proportion of 0–4 year olds in education was up by 4% since 2011; the rate was up by 6% since 2006.
- The proportion of 5–14 year olds in education was up by 6% since 2011, and up by 12% since 2006.
- The proportion of 15–19 year olds in education was up by 6% since 2011, and up by 7% since 2006.
- The proportion of 20–24 year olds in education was down by 2% since 2011; the rate was down by 1% over the decade.
- The proportion of 25+ year olds in education was steady since 2011. The rate was down by 1% from 2006.

Current education

In 2016, some 816 Indigenous children and teenagers in Lower Gulf CL were attending school, with 75 in pre-school, 532 in primary school, and 209 in high school.

The number of Indigenous pre-schoolers was up by 28 or 60% since 2011; it was up by 142% since 2006.

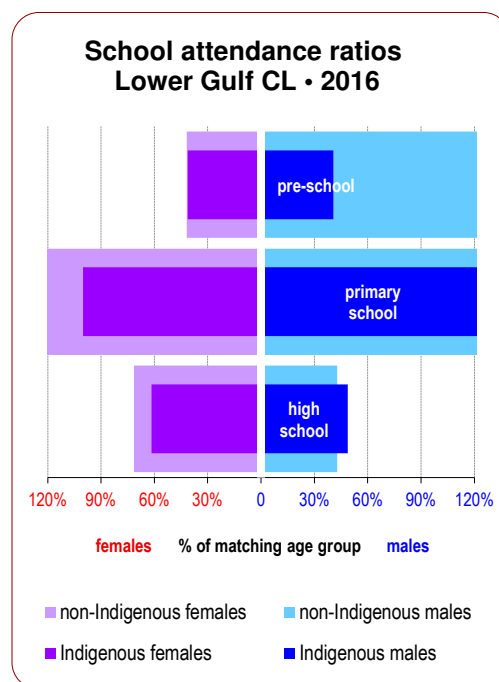

- ⌘ The 75 Indigenous pre-schoolers equalled 47% of the Indigenous children aged 4–5.
- ⌘ In Queensland, Indigenous pre-schoolers equalled 40% of the number aged 4–5 years. Non-Indigenous pre-schoolers in this Locality represented 89% of their age group.

The number of Indigenous primary students (532) was up by 22 or 4% since 2011; it was 116% higher than in 2006.

- ⌘ Indigenous primary students were 107% of the number aged 6–11. The rate exceeds 100% if children of other ages attend.
- ⌘ This rate was similar to the Indigenous rate in Queensland and 39% higher than for non-Indigenous children here.

The number of Indigenous secondary students (209) was up by 79 or 61% since 2011 and 222% higher than 2006.

- ⌘ Indigenous secondary students were 54% of the Indigenous children aged 12–17.
- ⌘ This rate was 4% higher than the rate for non-Indigenous secondary students here; it was 25% lower than for Indigenous students in Queensland.

21 Indigenous residents of Lower Gulf CL were in post-school education in 2016. This was little changed since 2011, and 9 more than in 2006.

In 2016, there were a few Indigenous 15–24 year olds from the Locality enrolled in TAFE.

- ⌘ 4% of Indigenous 15–24 year olds in Queensland attended TAFE, with 50% full-time.
- ⌘ No non-Indigenous 15–24 year olds in this Locality attended TAFE.

No Indigenous 15–24 year olds from the Locality attended university or other tertiary education.

- ⌘ 6% of Indigenous 15–24 year olds in Queensland were at university, with 84% full-time.
- ⌘ 4% of the non-Indigenous 15–24 year olds in this Locality were at university, with all full-time.

There were 11 Indigenous students aged 25+ from Lower Gulf CL attending TAFE in 2016 (1% of those aged 25–64), with - full-time.

- ⌘ 2% of Indigenous 25–64 year olds in Queensland attended TAFE, with 37% full-time.
- ⌘ 2% of the non-Indigenous 25–64 year olds in this Locality attended TAFE, with none full-time.

A few Indigenous residents aged 25+ from Lower Gulf CL were in university or other tertiary in 2016.

- ⌘ 3% of Indigenous 25–64 year olds in Queensland were at university, with 49% full-time.
- ⌘ 3% of non-Indigenous 25–64 year olds in this Locality were at university, with 17% full-time.

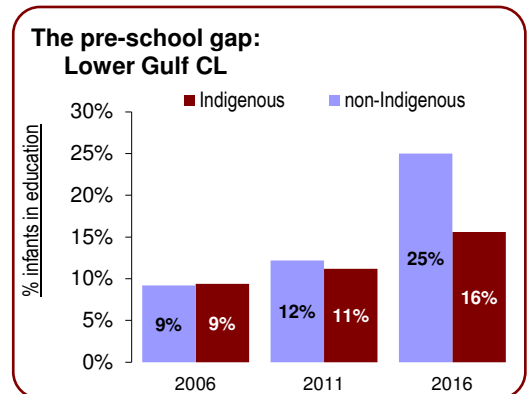

Education Attendance Indicators

The pre-school gap

% of infants under 5 in education

Early childhood education is an important contributor to success in school and later education, and makes paid work more feasible for parents.

- ⌘ In 2016, 16% of Indigenous infants in Lower Gulf CL were in education, compared with 25% of non-Indigenous infants. The pre-school gap was -9%.
- ⌘ The pre-school gap had widened by 8% since 2011, after having reversed over the previous five years.
- ⌘ The pre-school rates of Indigenous and non-Indigenous infants in Queensland were 15% and 18% in 2016, a gap of -3%. This gap had narrowed by 1% since 2011.

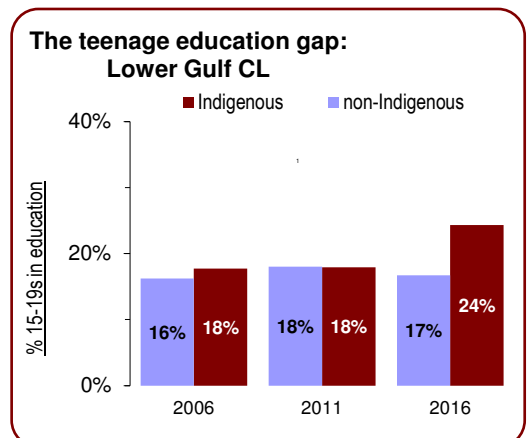

The teenage education gap

% of 15–19 year-olds in education

Education of older teenagers is vital for their future employment, so low levels of participation in education indicates disadvantage.

- ⌘ In 2016, 24% of Lower Gulf CL Indigenous teenagers aged 15–19 were in education, compared with 17% of non-Indigenous teenagers. The teenage education gap was +8%.
- ⌘ The teenage education gap had reversed since 2011, after having reversed over the previous five years.
- ⌘ The teenage education gap between Indigenous and non-Indigenous in Queensland was -17% and had narrowed by 2% since 2011. It widened by 1% over 2006 to 2011.

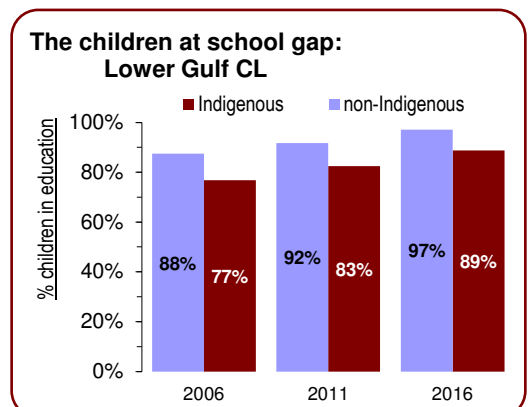

The children at school gap

% of 5–14 year olds in education

School is compulsory for children up to the age of 16. Low schooling rates suggest truancy and/or underage school leavers.

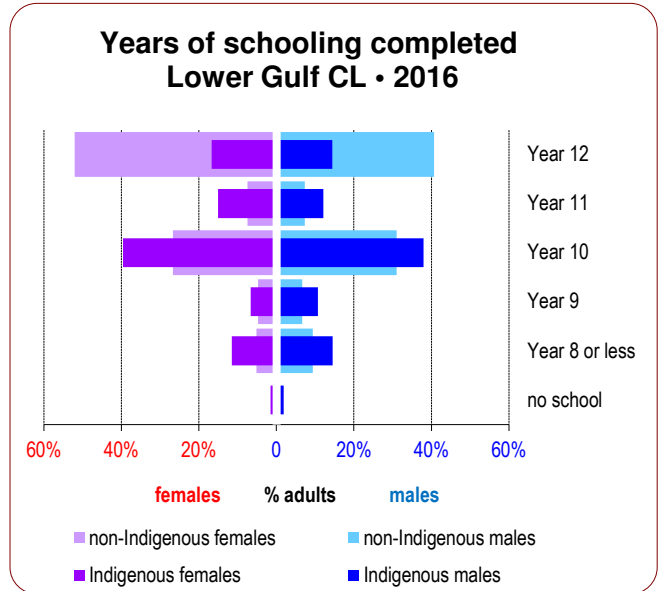

- ⌘ In 2016, 89% of Lower Gulf CL Indigenous children aged 5–14 were in education, and 97% of non-Indigenous of that age were. The schooling gap was -8%.
- ⌘ The schooling gap had closed by 1% since 2011, after having closed by 2% over the previous five years.
- ⌘ The schooling gap in Queensland was -5% and had narrowed by 3% since 2011. It changed little over 2006 to 2011.

Schooling levels

In 2016, the Indigenous adults (15+) in Lower Gulf CL had completed an average of Year 9.7 of school, compared with Year 10.7 for non-Indigenous adults. In Queensland, Indigenous adults averaged Year 10.5.

- ⌘ 327 Indigenous adults in the Locality had completed Year 12 which was 17% more than in 2011, and 79% more than in 2006.
- 16% of Indigenous adults in the Locality had completed Year 12, which was 30% lower than the rate for non-Indigenous adults.
- 38% of Indigenous adults across Queensland had completed Year 12.
- ⌘ 68% of Indigenous adults in the Locality had completed at least Year 10, which was 7% lower than for Indigenous adults in Queensland.
- ⌘ Of the others, 9% had completed Year 9 and 13% had completed Year 8 or lower; 44 adults did not go to school (2%); 9% did not say.

The average Year of school is calculated by multiplying the number aged 15+ who had finished each Year's school by the Year, assuming those who replied '8 years or less' averaged 7 years schooling and those who responded 'no school' had 0 years. Those who did not respond and those still at school are npt included.

The average Year when Indigenous people in Lower Gulf CL left school had risen by 4 months since 2011, and was up by 5 months since 2006.

Over the decade to 2016, there was an increase of 79% in the number who had finished Year 12, and an increase of 167% in the number who had finished school at Year 11.

For Indigenous adults in this Locality, average schooling:

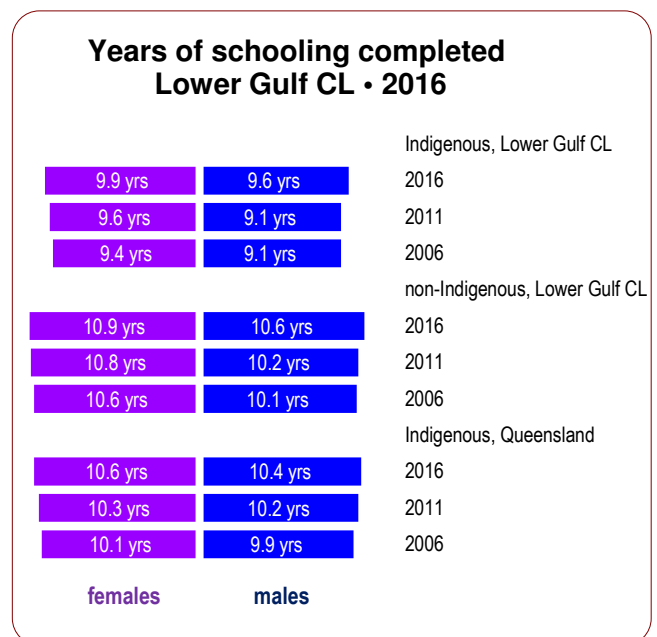

- ⌘ for men, had risen by 6 months since 2011, and had risen by 6 months since 2006.
- ⌘ for women, had risen by 4 months since 2011, and had risen by 6 months since 2006.

For non-Indigenous adults, average schooling:

- ⌘ for men had risen by 5 months since 2011, and had risen by 6 months since 2006.
- ⌘ for women had risen by one month since 2011, and had risen by 4 months since 2006.

The average schooling of Indigenous adults in Queensland:

- ⌘ for men had risen by 2 months since 2011, and risen by 6 months since 2006.
- ⌘ for women had risen by 4 months since 2011, and risen by 6 months since 2006.

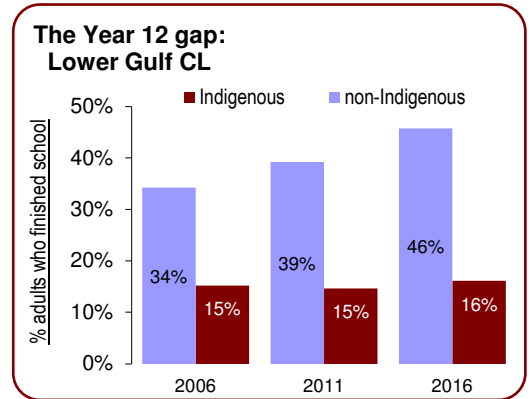

Education Achievement Indicators

The Year 12 gap

% of adults (15+) who have left school

The proportion of adults who have completed Year 12 is an important indicator of a community's educational resources. Nationally, over half of all adults (58%) have completed Year 12.

- ⌘ In 2016, 16% of the Locality's 2028 Indigenous adults had completed Year 12, compared with 46% of non-Indigenous adults. The Year 12 gap was -30%.
- ⌘ The Year 12 gap had widened by 5% since 2011, after having widened by 6% over the previous five years.
- ⌘ The Year 12 gap in Queensland was -19% and had narrowed by 1% since 2011. It widened by 1% between 2006 and 2011.

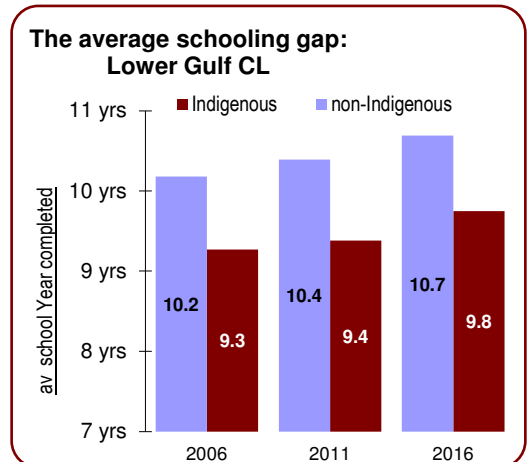

The average schooling gap

average school Year completed

The average Year of schooling completed by adults is an indicator of a community's educational resources. Nationally, the average is Year 11.

- ⌘ In 2016, the 2028 Indigenous adults in Lower Gulf CL had completed an average of Year 9.8 at school, compared with Year 10.7 for non-Indigenous adults. The average schooling gap was -0.9 years.
- ⌘ The average schooling gap had closed by one month since 2011, after having widened by one month over the previous five years.
- ⌘ The average schooling gap in Queensland was 6 months. It had changed little since 2011, after having changed little between 2006 and 2011.

Tertiary qualifications

The type and extent of post-school qualifications has a major influence on the earning capacities of a community. In the 2016 Census, 618 Indigenous adults in Lower Gulf CL reported having tertiary educational qualifications, which was 29% of the number aged 15+.

By comparison, 44% of Indigenous adults in Queensland and 60% of non-Indigenous adults in Lower Gulf CL had a tertiary qualification.

23 Indigenous adults in the Locality had a degree or higher qualification (1%), with a few having a postgraduate degree.

- ⌘ In Queensland, 5% of the Indigenous residents had a degree or higher qualification.
- ⌘ 17% of the non-Indigenous residents of Lower Gulf CL had a degree or more.

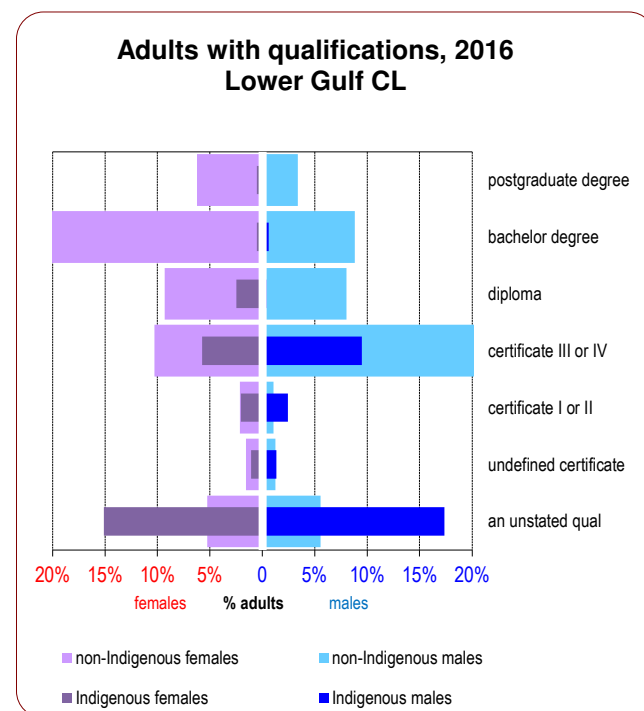

The most common highest qualification held by Indigenous adults here were:

- an unstated qual, held by 336 people (16%);
- certificate III or IV, by 156 people (7%);
- diploma, by 38 people (2%).

While the number of Indigenous adults in Lower Gulf CL rose by 8% from 2011 to 2016, the number with qualifications rose by 67%. There were:

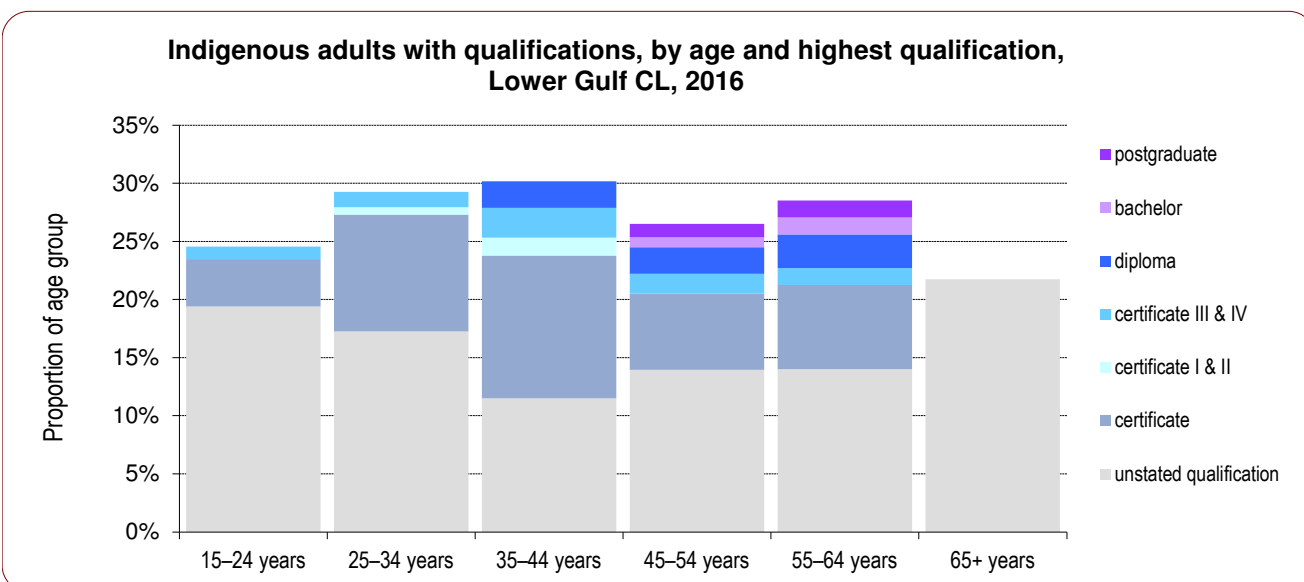

- 63 more with a certificate III or IV
- 14 more with a bachelor degree
- 12 more with a diploma

In the decade from 2006, the number of Indigenous adults in the Locality with qualifications increased by 124%, while the adult population increased by 74%. There were 110 more with a certificate III or IV.

In this decade, the number of Indigenous adults in Queensland with qualifications increased by 93%. There were 198% more with a postgraduate degree and 179% more with a diploma.

The chart below shows how the level of qualifications varies with age. Here, Indigenous people aged 35–44 years had the most higher qualifications, then people aged 25–34 years and 55–64 years.

Higher Education Indicators

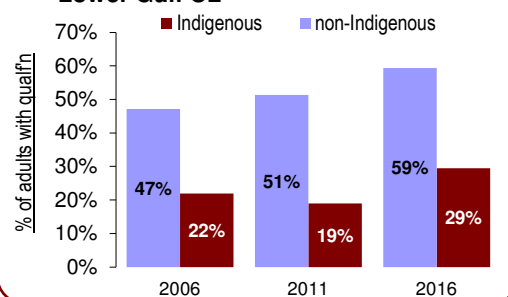

The qualification gap

% of adults 15+ with a post-school qualification

Tertiary and further education is becoming essential for many occupations, so the proportion of adults with post-school qualifications is a broad indicator of a community's earning capacity.

- ⌘ In 2016, 29% of Lower Gulf CL Indigenous adults aged 15+ had a post-school qualification, compared with 59% of non-Indigenous adults. The qualification gap was -30%.
- ⌘ The qualification gap had closed by 2% since 2011, after having widened by 7% over the previous five years.
- ⌘ The qualification gap between Indigenous and non-Indigenous adults in Queensland was -13% and had narrowed by 1% since 2011. It widened by 1% over 2006 to 2011.

**The qualification gap:
Lower Gulf CL**

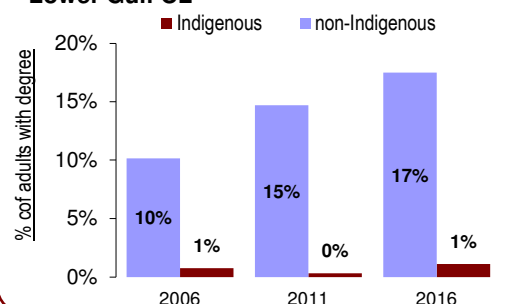

The degree gap

% of adults 15+ with a degree or higher qualification

Most higher skilled and better paid jobs require a university degree or equivalent for entry, so the proportion of adults with a degree or higher indicates the community's capacity to gain these jobs.

- ⌘ In 2016, 1% of Lower Gulf CL Indigenous adults aged 15+ had a degree or higher qualification, compared with 17% of non-Indigenous adults. The degree education gap was -16%.
- ⌘ The degree gap had widened by 2% since 2011, after having widened by 5% over the previous five years.
- ⌘ The degree gap between Indigenous and non-Indigenous adults in Queensland was -15% and had widened by 2% since 2011. It widened by 2% over 2006 to 2011.

**The degree gap:
Lower Gulf CL**

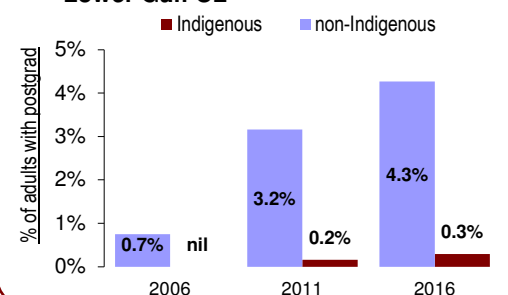

The postgraduate gap

% of adults 15+ with a postgraduate qualification

Increasingly, getting promoted in many industries requires a post-graduate qualification, but the number of Indigenous people with post-graduate degrees has been low.

- ⌘ In 2016, 0.3% of Lower Gulf CL Indigenous adults aged 15+ had a post-graduate qualification, compared with 4.3% of non-Indigenous adults. The postgraduate gap was -4.0%.
- ⌘ The postgraduate gap had widened by 1.0% since 2011, after having widened by 2.3% over the previous five years.
- ⌘ The postgraduate gap between Indigenous and non-Indigenous adults in Queensland was -4.3% and had widened by 0.8% since 2011. It widened by 1.8% over 2006 to 2011.

**The postgraduate gap:
Lower Gulf CL**

Disability levels

In 2016 in Lower Gulf CL, 94 Indigenous residents had a long-term severe disability; 2.9% of the population. Among all the Locality's residents, 2.9% similarly reported a disability.

People with a long-term severe disability are those needing help or assistance with self-care, mobility or communication, because of a disability, long-term health condition or old age. This data compares Aboriginal people with the total population.

- ⌘ Disability rates tend to rise with age. In Lower Gulf CL in 2016, they peaked among Indigenous 65+ year olds (30%) and 55–64 year olds (8%). Among younger Indigenous residents, the disability rate was highest among 20–24 year olds.

Because Indigenous communities tend to have fewer people in the oldest age groups where disability rates are much higher, the overall disability rate can be lower than in non-Indigenous communities. This can mask much higher rates in some age groups.

- ⌘ Here, the Indigenous disability rate was 1.0 times that in the overall population: 2.9% compared with 2.9%.

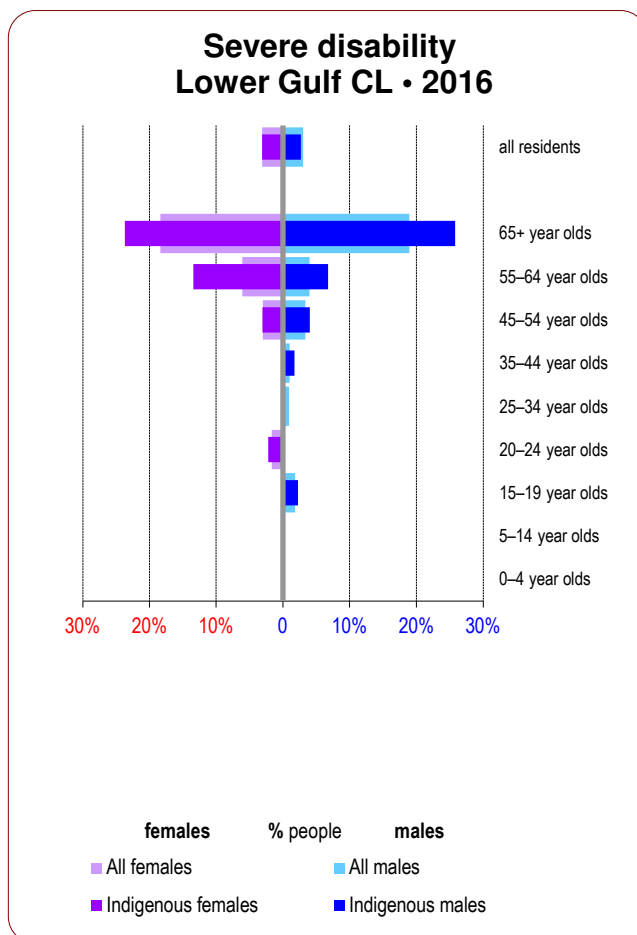

Among 55–64 year olds, the Indigenous disability rate (8%) was 2.1 times the overall rate (3.8%);

Among 65+ year olds, the Indigenous disability rate (30%) was 1.8 times that of all residents (16.3%).

- ⌘ Indigenous disability rates were similar for men and women (2.7% : 3.1%). Among all residents, they were similar for men and women: 3.1% to 3.1%.

There were 1.9 females per male among 55–64 year olds with a disability.

On the other hand, there were only females among 20–24 year olds with a disability. There were only males among those with a disability aged 15–19, 35–44.

From 2011 to 2016, the overall disability rate among Indigenous residents of the Locality changed little from 2.5% to 2.9%.

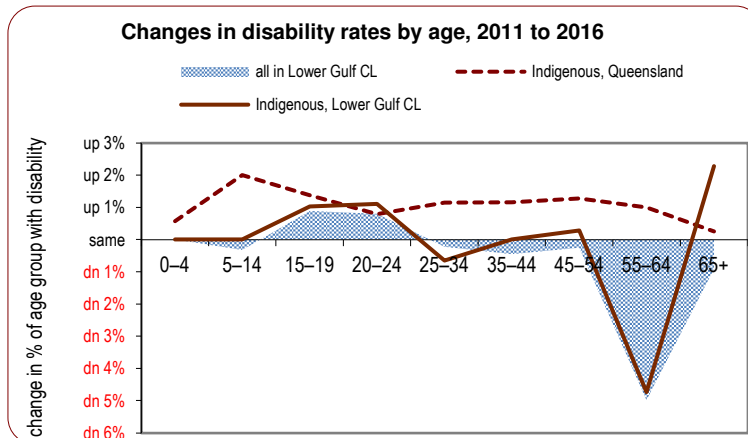

In the Locality, the greatest change in the Indigenous disability rate was the increase among those aged 65+, from 27.6% in 2011 to 29.9% in 2016.

Disability rates also rose among 20–24 year olds.

Disability rates fell most among those aged 55–64 years.

Among Indigenous people in Queensland, the disability rate rose from 4.8% to 6.4%.

Among all Lower Gulf CL residents, the disability rate changed little, from 2.9% in 2011.

Disability care given

In the 2016 Census, 202 Indigenous adults in Lower Gulf CL, 10% of the adult population, reported that they gave assistance to a person with a severe or profound disability. There were at that time 94 Indigenous residents who reported a severe or profound disability.

⌘ Across the age groups, the proportion of Indigenous people caring for a person with a disability ranged from 14% of 35–44 year olds and 12% of 25–34 year olds to 2% of 65+ year olds.

⌘ Carers are more often women than men. In this Indigenous community, there were 1.8 females per male among carers.

Female carers were most common among 55–64 year olds with 3.7 females per male caring, and among 20–24 year olds, with 2.6 females per male caring.

Male carers were most common among carers aged 15–19 with 1.5 males per female caring

⌘ The 10% carer rate among Indigenous residents was higher than the average for all adults in the Locality (8%).

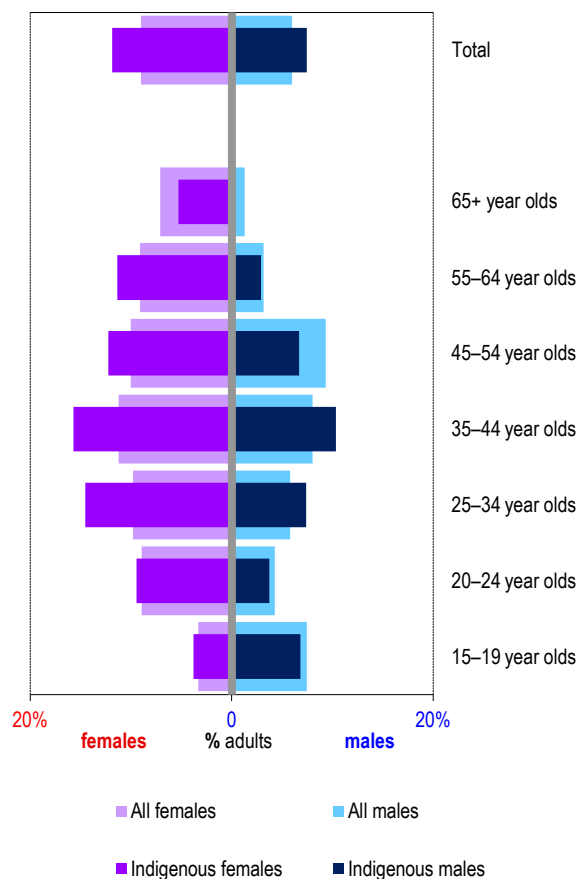

Among 25–34 year olds, the proportion of Indigenous carers was 1.5 times the average.

Among 35–44 year olds, the proportion of Indigenous carers was 1.3 times the average.

⌘ In Queensland, 13% of Indigenous adults were caring for a person with a disability.

Relative to the State's Indigenous community, there were 9% fewer carers among Indigenous people aged 55–64 here, and 9% fewer carers among those aged 65+.

Carers • Lower Gulf CL • 2016

From 2011 to 2016, overall caring rates among Indigenous adults in Lower Gulf CL changed only slightly from 9%.

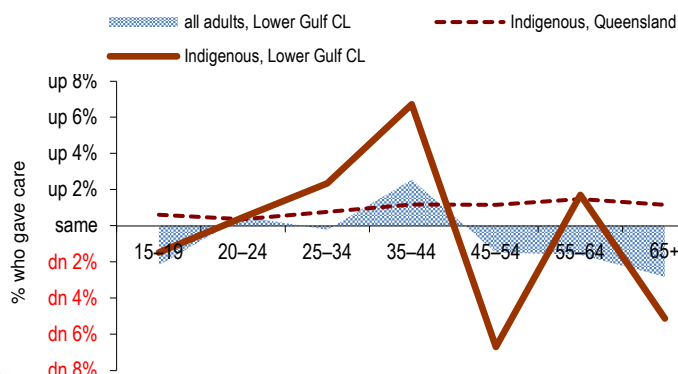

⌘ Among Indigenous adults in Queensland, caring rates rose by 1%.
Among all the Locality's adults, caring rates changed little.

⌘ In the Locality, Indigenous caring rates increased most among 35–44 year olds, from 7% in 2011 to 14% in 2016.

Caring rates also rose 2% among 25–34 year olds.

Caring rates fell most among 45–54 year olds, down by 7%, and among those aged 65+, down by 5%.

Changes in caring rates, by age, 2011–2016

Disability Indicators

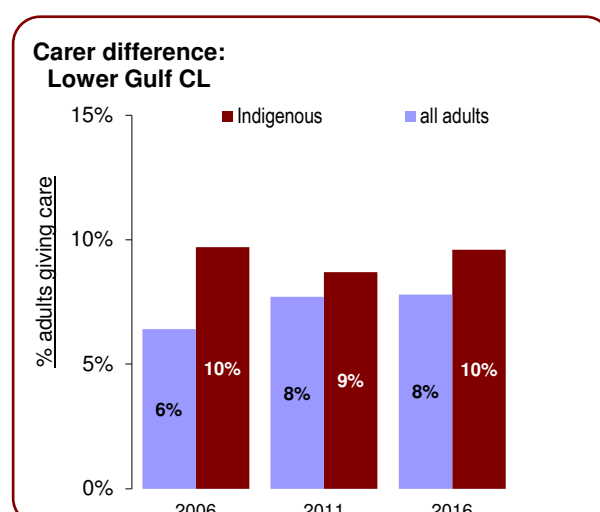

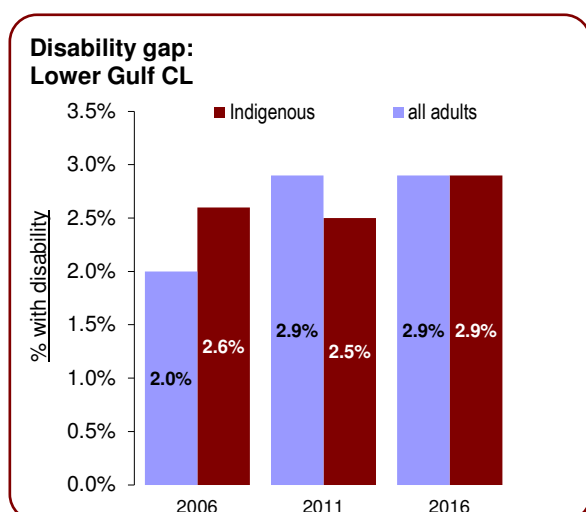

The disability gap

% of people with a severe, long-term disability

Disability rates provide a useful indicator of a community's health and need for support services. Nationally, disability rates among Indigenous people are about 25% higher than overall rates, across most age groups.

- ⌘ In 2016, 2.9% of the Locality's Indigenous residents had a severe, long-term disability, compared with 2.9% for all residents. The disability gap was nil. The Indigenous disability rate was 1.0 times the overall rate.
- ⌘ The disability gap in Lower Gulf CL had widened by 0.4% since 2011, after having reversed over the previous five years.
- ⌘ The disability gap in Queensland was +1.2% and had widened by 0.8% since 2011.

In the Census, people with disabilities are those with a severe or profound disability lasting more than six months, who require help with daily activities, self-care or communicating.

The carer difference

% of adults caring for a person with a disability

Indigenous people have higher disability rates and larger families, so often have proportionally more carers than the general population.

- ⌘ In 2016, 10% of the Locality's Indigenous adults (aged 15+) provided assistance to a person with a severe disability, compared with 8% of all adults. The carer difference was +2% (rounded).
- ⌘ The carer difference in Lower Gulf CL had widened by 1% since 2011, after having closed by 2% over the previous five years.
- ⌘ The carer difference in Queensland was +2% in 2016. This had changed little since 2011.
